

Can you step through this piece of paper?

What if we told you that there is a way to step through this piece of paper?

It doesn't matter how big, small, or tall you are, there's a way to cut it so that your whole body fits through. It might sound impossible, but with some imagination it can be done.

Turn over to see how it's done.

Engineers make the impossible possible every day by thinking creatively to solve problems, and this is just a little taster.

So, if you want to develop an amazing new computer game, help someone walk again by creating lifelike prosthetic limbs or even design robots that do your chores, take a closer look at whether engineering could be for you.

Visit **yearofengineering.gov.uk** for more inspiration.

TAKE A CLOSER LOOK

DO NOT CUT →

Make sure you read all the instructions before you start cutting!

01. Fold this leaflet in half along the red and blue dotted line.
02. **Keep the leaflet folded** and use scissors to cut along all the solid red lines, making sure you stop at the stars.
03. Finally, cut along the red part of the dotted line. **Don't cut the blue sections of the dotted line.**
04. Unfold and just like magic, you can step through!
