Commentary on the Western & Wales Timetable Planning Rules 2021

Version 2

Final Principal and Preliminary Proposal for Principle Timetable Change 2021

This document is a covering note for the Timetable Planning Rules – Final Principal and Preliminary Proposal for Principal Change Rules 2021 – and provides a specific commentary to the route described above.

In the Timetable Planning Rules document each change in content is indicated by the following convention:

New or Amended text is red

~~Deleted text is green and struck through~~

The change is also highlighted with a thick vertical line at the right hand side of the page.

The following is a summary of changes in content from Version 2.0 of the 2021 Timetable Planning Rules.

1 Introduction and General Notes

1.1 Index Of Routes

2 Route Description

2.1 Planning Geography

GW570	Frome North, added S to code column to show that it is used for A stops as well.
GW608	Added Sampford Courtenay as a timing point for stopping services
GW9001	Swansea Maliphant IEP depot has been added and Swansea IEP wash road/ Swansea IEP maintenance road have been removed
GW103	Removed Old Oak Common CS from planning geography.
GW103	Removed Old Oak Common HSTD from planning geography.
GW103	Added note at Acton West to show that URL is not to apply to trains weaving from ML to RL.
GW105	Added note at Swindon Cocklebury to show that it is for GWR EMU stabling sidings
GW110	Added note at Old Oak Common West to show that there is no route between Park Royal and Old Oak Common west (No track).
GW610	Added RVL to up line code At Exeter St Davids to Exeter Central
GW640	Amended Coombe to read Coombe Junction Hall to match TIPLOC name and signage

GW9001	Added UM route code at Swansea Loop East Jn for trains in down direction if train has come from Landore Jn
GW9001	Added DM route code at Swansea for moves in the up direction running bi-di
GW200	Amended route codes at Oxford up & down passenger loop to show a route code is not needed as the trak code can be amended on TPS.
GW317	Removed 'S' from code column at Honeybourne North Jn as it is mandatory.
GW425	Removed 'X' cpde from Berkeley Road Jn as it is mandatory
GW840	Added blank linecodes to the linecodes column at Ninian Park
GW900	Removed the 'X' code from Ebbw jn as it is mandatory
GW103	Added line codes at Royal oak in the Up direction, removed line 6 in the Down direction, removed line 6 from Portobello Jn in the Up direction.

2.2 Route Opening Hours

GW733	Sutton Bridge Jn appeared twice in this section. Removed one of the entries and amended note to show that Sutton Bridge Jn signal box is equipped to be switched out
--------------	--

5 Running Times, Margins and Allowances

5.2 Headways

GW600	Amended headway to show 4 minutes between wooton bassett jn and Westerleigh, then 3 between westerleigh and Bristol Parkway, then 4 from parkway to Pilning.
GW107	Amended GW107 headways to AB+1 vice AB
GW548	Amended headways to reflect new signal and to show that the headways should be AB and not single line.
GW105	Amended to be North Somerset Jn vice Bristol East, as stated above
GW110	Amended Headways to be Park Royal to South Ruislip as Old Oak Common west to Park royal has been closed and lifted.
GW250	removed 4 minute headway as it is one train in section at a time.
GW340	Amended note, adding 'in classes 0, 4, 6, 7, 8' to text.
GW500	Amended headways to show the 3 minutes headway at Southcote Jn is inclusive of Southcote Jn. Amended Southcote to Fairwood Jn headway to be Southcote to Theale, then theale to Fairwood jn, with a 3 minute headway to theale and a 5 minute headway for freight

5.3 Junction Margins and Station Planning Rules

GW103	Adjustment added at Hayes and Harlington to show a {1} for services arriving into platform 5 due to approach control
GW440	Amended yate signal rules to be for 568 as 607 has been removed and replaced by 568.
Standard	Added a {1} for entering an occupied platform
GW108	Removed {1} from Plymouth for trains entering an occupied platform. Due to adding a standard value for this.

GW200	Didcot North Jn, removed crossing and conflicting margin if 1 1/2 as it isn't necessary anymore.
GW610	Added a minimum 2 minute dwell for services arriving into St James' Park from Exeter St David's before departing as an ECS to Exmouth.
Standard	Moved Minimum allowance for class 165/6 or 170 unit to depart after detaching under D.O.O operation to show below detachment values.
GW103	Added class 22x to adjustment at Didcot parkway for services from DRL or DML to platforms 4 or 5.
GW108	Amended junction margin at Newton Abbot to say 'Train in down direction arrives in platform 1 or 3' vice just stating platform 1.
GW450	Added dwell at Filton Abbey Wood for XC 22x for trains during the morning peak arriving at Bristol Temple Meads between 0700 and 0900
GW105	Added short form GWR Short form HST dwell times at Bedminster, Parson Street, Nailsea and Backwell, Yatton and Worle of 1 minute, except SX between 1600 and 1830
GW108	Exeter st davids, moved 22x from the {1/2} required to the {1} for trains into 1,2,4 and 6 from St Thomas/Dawlish.
GW108	Exeter st davids, moved 22x from the {1/2} required to the {1} for trains into 2,3,5 or 6 from the Cowley Bridge direction
GW108	Added new adjustment at Exeter St Davids for trains from Platforms 1,2,3,4 or 6 to Cowley Bridge of {1/2} for 22x
GW400	Gloucester yard jn, moved 22x from {1/2} to the {1} required for trains towards gloucester horton road junction.
GW400	Standish Jn, 22x moved from {1/2} to {1} for trains towards the direction of stroud.
GW107	Added dwell time for HSTGW4 at Weston super mare, with a note for extended dwell SX 1545 - 1830 in the down direction only. Amended station working note to include class 80x services.
GW900	Added new junction margins at Marshfield
GW103	At Paddington added platform 6 to the list of platforms that 10 car IETs cannot attach or detach in.
GW620	Added note at Paington regarding Paington South level crossing attendant after GWR discussions with the LOM.
Standard	Brake testing section has been removed and rewritten to show that the {1/2} needs to be added manually as it is not included in SRTs for brake testing. The section regarding locations that already include {1/2} in the SRT has been removed as it is not applicable to 80x timing loads.
Standard	Amended 80x 5 car attachment of locomotives to show that 8 minutes is needed at Bristol Temple Meads only.
Standard	Reinstated 4-6 and 7-9 formation values for Reversal on GW routes for class 165/166/769
Standard	Amended class 80x reversal time to be 6 minutes in platform and 8 minutes when not in a platform. Amended class 80x 9/10 car to be 8 minutes in platform and 15 minutes when not in a platform
GW103	At Paddington, amended the platform re-occupation to be the current 5, but can be reduced to 4 by agreement.
GW103	Added 80x to list of timing load that need {1} at Slough for Crossing from DRL to DML at Dolphin Jn and added 387 / 80x to list of timing loads that require {1} from down direction into platform 5 at Slough.

GW103	Added class 80x to 1 1/2 dwell time at Slough. Amended class 80x turnaround time (from paddington) to be 6 vice 5 minutes and class 80x 9/10 car to be 8 vice 7 minutes
GW103	At Maidenhead, amended turnaround times from Paddington to be 6 vice 5 for 5 car 80x and 8 vice 7 for 80x 9/10 car.
GW103	Amended turnaround times at Twyford for trains from Paddington for class 80x (5 car) to be 6 vice 5 and 80x (9/10 ca) to be 8 vice 7
GW103	Amended Reading turnaround allowances from Banbury and Bedwyn/newbury/Oxford and from Paddington for 80x 5 car to be 6 vice 5 and 80x 9/10 car to be 8 vice 7.
GW103	Amended platform re-occupation at Reading to show that platforms 7-12 & 15 area a 4 minute re-occupation. And platform 13 & 14 are 4 but can be reduced to 3 when the second train has a minimum of 1 pathing
GW103	Tilehurst turnaround allowances amended for 80x 5 car to 6 vice 5 and 80x 9/10 car to 8 vice 7.
GW103	Added note to North pole IEP depot stating that the use of adjustment allowance between north pole and ladbroke grove is permitted
GW103	Amended junction margin at Didcot East Jn for a down train crossing from DR to down avoider and a down train from down RL passes Didcot East Jn from 4 to 3
GW105	At Swindon, added 80x to adjustment allowances for Hullavington to Swindon pass to stop and pass to pass
GW105	At Bristol Temple Meads, amended turnaround time for short form GWR HST to be 6 vice 5 when from Bristol Parkway/Bath Spa/Severn Beach
GW105	Yatton down and up loops, added note that the adjustment allowance is not to apply to trains that have called at Yatton
GW108	Added platform end conflict margin at Taunton for a train departing platform 2 or 3 in the up direction and a train arriving into platform 2 or 3 in the down direction to be 5 minutes.
GW108	Amended reference to 1A40 in notes under dwell time at Exeter st Davids to now read Up Sleeper vice 1A40 as it is currently running on a different headcode.
GW108	Amended platform end conflict margins at Exeter St David's for a train departing exeter st davids that does not call at exeter st thomas to clear up any confusion.
GW108	Amended platform end conflict margin at Exeter St Davids for Departing platform 5 in the down direction and an arrival into platform 6 to now show that it is a departure from 5 or 6 and an arrival into 5 or 6.
GW108	Amended Exeter st davids turnaround allowances for GWR HST short form from Barnstaple/Paignton/Exmouth to be 6 vice 5
GW108	At Starcross, amended dwell time for 142 to 150 services to be 1 minute vice 30 seconds.
GW108	Newton abbot, split GWR Short Form HST to have own column for turnarounds. Added value of 6 for services from Paignton/Exeter
GW108	Amended the turnaround values at Plymouth for services from Liskeard/Gunnislake (turn around in station) for GWR Short Form HST to be 6. amended Terminating trains proceeding ECS to Laira Depot to be 5 vice 10

GW103	Added an adjustment allowance at Southall for class 387s that have come from Heathrow Airport
GW103	Added adjustment allowances at Southall and at Heathrow Airport jn for {1/2} to be added to class 387s to and from Heathrow Airport in either direction
GW108	At Par amended note for platform end conflicts to read 'A train from the St Blazey direction cannot arrive into Platform 3 at Par until 4 minutes after the preceding up direction service from platform 2.'
GW108	At Truro, amended platform end conflicts to read 'train arriving or departing' and 'Down train arriving/passing'
GW108	At St Erth, amended adjustment allowance to read all traffic vice GWR 80x. Added note to 800 / 802 dwell times to show extended dwell on summer Saturdays
GW108	At Penzance, deleted 30 turnaround allowance for 80x 9/10 cars from Paddington and North OF BTM as it is duplicated. And added note to show that the reduced turnaround for services from St Ives is for DMU only.
GW300	At Worcester Shrub Hill, amended 80x dwell times to be 1 1/2 vice 1.
GW300	Added new junction margin at Worcester Shrub Hill for arrival or departure in Worcester Shrub Hill P3 or Worcester Back Road and an Up arrival into Worcester Shrub Hill P2
GW310	At Worcestershire Parkway added junction margins for a train passing Norton Junction towards Abbotswood Jn and a down train departing Worcestershire Parkway. And a junction margin for a train passing Norton Jn towards Worcester Shrub Hill and a down train from Worcestershire Parkway.
GW340	At Worcester Foregate Street, amended dwell for 80x to be 1 1/2 vice 1
GW340	At Great Malvern amended turnaround allowances for 80x 5 car and 80x 9/10 car.
GW340	Malvern Wells, amended capacity constraints notes.
GW400	At Barnwood Jn, removed 80x from adjustment allowances, as allowances are included in the SRT.
GW400	At Standish Jn removed 80x from adjustment allowances, as they are included in the SRT.
GW400	At Cam & Dursley, removed GWR Short Form HST from dwell time, as the standard dwell applies.
GW450	At Filton Abbey Wood, amended the note for dwell times between 0745 and 0925 to read platforms 2 and 4 vice 2 and 3.
GW700	Added {1/2} at Horton Road Jn to match with values on GW490
GW490	Horton Road Jn, removed adjustment allowance table and added note to refer to GW700 for the margins for Horton Road Jn
GW500	At Newbury Racecourse, in adjustments to SRT section, replaced 'HSTs' with 'Train'
GW500	At Newbury, amended 'in the down direction only, trains originating or splitting at Newbury Station' to be its own entry, for allowance to be shown after this location, rather than approaching this location.
GW500	At Newbury, removed 319/387 from dwell times as they can only reverse due to being electric traction only.
GW500	At Bedwyn, split 'passing Bedwyn having come from Bedwyn Reversing siding' allowance in order to show that it is to apply after this location.

GW500	At Bedwyn, added a new margin for an up non-stopping train passing bedwyn and an up ECS move to Bedwyn platform 1 departing bedwyn reversing sidings
GW500	Amended Bedwyn dwell times to show an 80x through service, and 80x terminating down service and an 80x originating up service. And their new dwell times.
GW500	At Lavington, amended adjustment allowance to remove the HST reference and replace with Train
GW500	At Fairwood Jn added new adjustment allowance for a move from Frome avoider towards Westbury.
GW510	At Bradford Jn, added 80x and HSTGW4 to timing loads that require adjustment allowance. Removed duplicate values.
GW560	At Westbury, added HSTGW4 to 1.5 min dwell time.
GW560	At Westbury, added note to normal platform use, platform 1, that allows trains from paddington to use platform 1 if necessary due to avoiding a conflict or if platform 2 is occupied.
GW600	At Westerleigh Jn added 'or up passenger loop' to adjusment allowance 'from bristol parkway platform 4'
GW606	At Copplestone, added request stop
GW606	At Umberleigh, added request stop
GW611	At Exton, added request stop
GW611	At Lympstone Commando, added request stop
GW620	At Paignton, removed reference to 10 car 80x in Turnaround allowance section as 10 car is not permitted over GW620.
GW620	At Paignton, removed % note from HST from Paddington due to no longer being relevant.
GW620	At Paignton, amended any reference to Paignton North to read Paignton Signal 3, to match TIPLOC.
GW660	At Par, amended platform end conflict note to read 'a train' rather than 'a 80x' as the restriction applies to all traffic
GW660	Removed HSTGW4 from Luxulyan, Bugle, Roche, St Columb and Quintrell Downs dwell entries, as they would require a 1 minute open stop and this is covered by the standard values.
GW660	Added note at Goonbarrow jn for 'operation of 10 car 80x requiring special arrangements if crossing another service.
GW660	At Newquay, amended turnaround allowances to show HSTGW4 in it's own column, and added values for turnarounds from Bristol Plymouth and from Par. Amended 80x (5 car) allowance to be 7 vice 5.
GW660	At Newquay, added note that the trains stopping at all stations allowance of {2} is not to apply to HSTGW4 trains
GW700	At Horton Road Jn, added an adjustment allowance for trains routed beyond Horton road jn into P1 at gloucester if P2 is occupied.
GW700	At Horton Road Jn, removed timing loads from 'trains routed beyond horton road into Gloucester P2, via a weave to pass train in P1' and added all passenger trains
GW700	At Horton Road Jn, for allowance 'trains routed beyond horton road jn towards Awre via Uml' add 'or URL' and removed all passenger timing loads pus the {1} and added 'all passenger trains' to a {1/2} allowance.

GW700	At Horton Road Jn, for allowance 'trains routed beyond Horton road Jn into gloucester P4' removed all timign loads plus the {1} and added 'All passenger trains' to allowance {1/2}
GW700	At Horton Rd Jn, added a new adjustment allowance of {1/2} for all ECS moves routed beyond Horton Rd Jn directly into Gloucester C.H.S.
GW700	At Gloucester, amended adjustment allowance for Horton road jn to gloucester P2 via P1 to show that it is due to Longer route combined with stopping requirements. Amended it to apply to 80x and XC HST only.
GW700	At Gloucester, amended adjustment allowance for 'Horton road jn to Gloucester p2 via UML' to show reason as approach control at G154 signal and stopping requirements. Amended to show that it applies to 80x and XC HST only. Added allowance for all other traffic of {1/2}
GW700	At Gloucester, for adjustment allowance for 'Horton road jn to Gloucester p4' amended reason to read 'Slow speed connections' and amended timing loads to apply to 80x and XC HST only. With a new adjustment for All other traffic of {1/2}.
GW700	At Gloucester, added a new allowance for 'gloucester platform 2 to horton rd jn via P1' due to approach control for all traffic of {1/2}
GW700	At Gloucester, adjustment allowance for 'gloucester p4 to horton rd jn' added 'or url' and amended reason to read slow speed connections. Added new value for all other traffic of {1/2}
GW700	At Gloucester amended platform re-occupations, added values for Horton road jn end and gloucester west end.
GW700	Amended the platform end conflict margins at Gloucester after on ground observations. Added planning notes.
GW700	Removed allowance at Gloucester for 'gloucester platform 2 to Horton road jn'
GW700	At Gloucester, added 'for class 80x' to platform workings
GW700	At Severn Tunnel Jn, 80x dwell time amended to 1 vice 2.
GW900	At Severn Tunnel Jn, 80x dwell time amended to 1 vice 2.
GW900	At Cardiff Central, amended 80x dwell to be 2 for all days vice 3 SX and 2 SO & SU
GW900	At Llanelli, amended 80x dwell time to be 1.5 vice 2
GW900	At Pembrey & Burry port, added 80x dwell time of 1.5 minutes
GW950	Removed request stop from class 80x at Narberth, kilgetty, penally & lamphey.
GW950	Amended class 80x dwell time from 30 seconds to 1 minute at Narberth, Kilgetty, Saundersfoot, Penally & Lamphey.
GW310	At Norton Jn removed rules and added note to 'refer to GW300 for rules at this location' as they are just a duplication of GW300 rules.
GW600	At Bristol Parkway, moved adjsutment from Filton Abbey wood, to show that the adjustment is after Bristol Parkway. Removed from Filton Abbey Wood
GW450	Moved adjustment allowances at Filton abbey wood to Dr Days Jn. Removed from Filton Abbey Wood
GW450	At Narrowways Hill Jn, moved an adjustment allowance to Dr Days Jn to show that it is to apply to moves from Dr Days. Removed from Narrowways Hill Jn
GW600	At Bristol Parkway, added an adjustment for trains from patchway running wrong direction into platform 1, 3 or 4 for all traffic.

GW600	At Patchway, added an adjustment allowance for schedule running bi-di to Parkway.
GW450	Added junction margins at Filton Abbey Wood for trains arriving or passing platform 2 at Filton and trains departing or passing p1 or 2 at Bristol Parkway
GW600	Added junction margins at Bristol Parkway for trains from Filton abbey wood into platform 1 and a departure from platform 2 at Bristol parkway

5.4 Platform Lengths

5.4.1 Loop Lengths

GW105	Added loop length for Swindon Up reception line of 124SLU after discussions with LOM
--------------	--

5.5.1 Timing Allowances

GW600	Removed note at Patchway for increased engineering allowance for services to Birmingham Via Charfield
GW900	Removed note that allowance only applies to trains to Birmingham or beyond via Chepstow or Yate. Added a note that the allowance only applies to freight.
GW103	Removed reading from engineering allowance approaching reading or kennet bridge jn, now just shows Kennet bridge
GW103	Amended allowance approaching either Didcot East Jn or Didcot Parkway, split into 2 allowances to show Didcot East on RL and Parkway on ML.
GW510	Amended the 2 approaching bathampton jn to be a 1
GW108	changed order of TIPLOCs in the up direction to show Plymouth ahead of Exeter.
GW310	Removed Norton Jn and added Worcestershire parkway, for aservices that call at Worcestershire parkway only.

This document is provided as part of the consultation period from D-64 and running through to D-60 in accordance with Network Code D2.2.2, and ahead of the Draft 2021 TPR (Version 1) which will be published by Network Rail at D-59.

It is possible that Network Rail will add to the consultation materials between now and D-60 and, as such, will agree to consult additional material submitted from other timetable participants during this timeframe where appropriate.

Please send any responses to David.bacon2@networkrail.co.uk as soon as possible in order that any queries and concerns can be dealt with in advance of the publication of the Draft Rules at D-59. It is appreciated that this might not be achievable in all cases and this request does not affect any timetable participant's ability to respond after D-59 in accordance with Network Code D2.2.4 and 2.2.5.

These represent the revised Timetable Planning Rules (the “Draft Rules”) for the Subsidiary May 2020 timetable in accordance with Part D of the Network Code, Condition D2.2.3.

As per Condition D2.2.4 of Part D of the Network Code, following distribution of the Draft Rules and by D-54, Timetable Participants may make representations to Network Rail in respect of any changes they propose or objections they may have to the Draft Rules provided to them in accordance with D2.2.3.

1 Introduction and General Notes

Network Rail provide the Timetable Planning Rules document to Train Operators and other interested parties to set out the rules which are applicable to Access Requests for scheduling of train paths on the Network Rail network. Separate sections of Timetable Planning Rules are prepared for each Route with a National Timetable Planning Rules document setting out procedures to be followed and other nationally applicable rules.

Network Rail will determine the contents of Timetable Planning Rules through consultation with Train Operators with the primary aim of achieving the optimal balance between access to the network for train operations and performance robustness of the resulting train plan. This consultation is in line with the Network Code Part D, and Train Operators have a right of appeal to Timetabling Sub-Committee against the contents of the Final Timetable Planning Rules.

Final Timetable Planning Rules are issued with timetable Access Request Information before the commencement of the development period for the Principal Change timetable to which the Rules apply and cover a 12-month period. Revised Timetable Planning Rules are issued with timetable Access Request Information before the commencement of the Subsidiary Change timetable development period and show changes applicable to the Subsidiary Change timetable period, which have been agreed since the issue of the annual Timetable Planning Rules.

Timetable Planning Rules may be changed only through this twice-yearly process or by the change procedure described in the National Timetable Planning Rules.

Train Operators' Access Requests for train paths must be compliant with Timetable Planning Rules. If a Train Operator wishes to submit an Access Request for a train path which is not compliant with Timetable Planning Rules, it should consult the Network Rail Capacity Planning team to establish whether an amendment to Timetable Planning Rules is likely to be agreed and, if appropriate, submit an amendment proposal which will be considered by Network Rail in accordance with the Change Procedure set out in the National Timetable Planning Rules. The Timetable Planning Rules amendment proposal should be submitted to Network Rail as early as possible and certainly no later than the time of submission of the Access Request. If the proposed change is likely to involve the calculation of new sectional running times or a physical investigation then the Train Operator should liaise with the Capacity Planning team to establish a realistic timescale for evaluation of the proposed change before submission of the Access Request.

1.1 Index of Routes

Information arranged on a line of route basis in this document is presented in the following order:

GW103	Paddington to Uffington
GW105	Uffington to Fordgate via Box
GW107	Worle to Uphill via Weston–super–Mare
GW108	Fordgate to Penzance
GW110	Old Oak Common West to South Ruislip (excl.)
GW117	Greenford East Jn to Greenford South Jn
GW130	Acton Wells Junction to Acton East Jn
GW174	West Ealing to Greenford West Junction
GW175	Greenford South Jn to Greenford
GW176	Hanwell to Drayton Green
GW178	Southall to Brentford Goods
GW180	Heathrow Airport Junction to Heathrow Terminals 4 & 5
GW182	West Drayton to Colnbrook
GW184	Slough to Windsor & Eton
GW185	Maidenhead to Marlow
GW187	Twyford to Henley–on–Thames
GW190	Reading Spur Jn to Reading New Jn
GW200	Didcot to Heyford (excl.)
GW220	Oxford Road Jn to Reading West Jn
GW225	Reading caversham road jn to Oxford road jn (Reading feeder lines)
GW240	Didcot East Jn to Didcot North Jn
GW250	Foxhall Jn to Didcot West Curve Jn
GW260	Kennington Junction to Cowley
GW277	Oxford North Jn to Oxford Parkway
GW300	Abbotswood Junction to Stoke Works Junction. via Worcester
GW310	Wolvercote Junction to Norton Junction.
GW317	Honeybourne North Junction to Long Marston
GW340	Worcester Shrub Hill to Shelwick Junction
GW350	Worcester Tunnel Junction to Henwick
GW370	Droitwich Spa to Cutnall Green
GW401	Ashchurch (incl.) to Westerleigh Junction
GW425	Berkeley Road Junction to Sharpness
GW430	Yate Middle Junction to Tytherington
GW440	Yate South Junction to Westerleigh
GW450	Stoke Gifford Junction to Bristol East Junction
GW4501	Stoke Gifford Junction to Bristol Bulk Handling Terminal
GW451	Filton Junction to Filton West Junction (Filton Chord)
GW454	Severn Beach to Narrowways Hill Junction
GW456	Lawrence Hill to Barrow Road RTS
GW480	Swindon to Standish Junction
GW490	Gloucester Yard Junction to Horton Road Junction
GW500	Reading to Cogload Junction via Westbury and Frome avoiding lines (Berks. and Hants line)
GW5001	Beechgrove GF to Westbury South Junction
GW510	Westbury North Junction to Bathampton Jn
GW520	Westbury East Loop Jn to Hawkeridge Jn
GW523	Thingley Jn to Bradford Junction
GW528	North Somerset Junction to Bristol West Junction (<i>Great Western Railway lease from Dec 2006</i>)
GW530	North Somerset Jn to Dr. Days Jn ("Rhubarb Loop")
GW540	Filton Junction to Patchway Junction

GW5401	Filton West Junction to Patchway Junction (Patchway Chord)
GW548	Parson Street Junction to Portbury Terminals
GW560	Heywood Road Junction to Fairwood Junction via Westbury
GW570	Clink Road Junction to Blatchbridge Junction via Frome
GW572	Frome North Junction to Whatley Quarry
GW580	East Somerset Junction to Cranmore
GW600	Wootton Bassett Junction to Pilning
GW606	Cowley Bridge Junction to Barnstaple
GW608	Crediton to Coleford (Meldon Line)
GW610	Crannaford L.C. (incl.) to Exeter St. David's
GW611	Exmouth Jn to Exmouth
GW618	Newton Abbot East Junction to Heathfield
GW620	Newton Abbot West Junction to Goodrington C.S.
GW628	Laira Jn to Cattewater via Speedway Jn
GW629	Laira Jn to Mount Gould Jn
GW630	Lipson Jn to Mount Gould Jn
GW637	St.Budeaux Junction to Gunnislake
GW640	Liskeard to Looe via Coombe
GW642	Coombe (excl.) to Moorswater
GW650	Lostwithiel to Carne Point, Fowey
GW660	Par to Newquay
GW672	Burngullow to Parkandillack
GW680	Penwithers Junction to Falmouth
GW690	St. Erth to St.Ives
GW700	Gloucester Barnwood Junction to Severn Tunnel Jn
GW710	Llanwern Steelworks East Connection to Llanwern Steelworks West Connection via Service Lines (Tata Steel infrastructure)
GW720	Fifoots Point Power Station to East Usk GF
GW730	Severn Bridge Jn to Newport Maindee West Jn
GW731	Abbey Foregate to Wrexham North Jn
GW732	Abbey Foregate Jn to English Bridge Jn
GW733	Sutton Bridge Junction to Aberystwyth
GW734	Dovey Junction to Pwllheli
GW735	Shrewsbury Crewe Junction to Gresty Lane
GW740	Maindee East Jn to Maindee North Jn
GW750	Hereford Brecon Curve GF to MEB Siding
GW770	Ebbw Vale Town to Gaer Junction
GW773	Machen Quarry to Park Junction
GW780	Park Jn to Ebbw Jn
GW784	Alexandra Dock Junction to 160 miles 27 chains (boundary with ABP Newport Docks)
GW790	Pengam Junction to 4m 54ch (ABP) Cardiff Docks
GW810	Rhymney to Queen Street North Junction
GW820	Cwmbargoed to Ystrad Mynach South
GW828	Coryton to Heath Junction
GW830	Merthyr Tydfil to Barry Island via Cardiff Queen Street
GW834	Hirwaun to Abercynon
GW835	Treherbert to Pontypridd Junction
GW839	Queen Street South Junction to Cardiff Bay
GW840	Radyr Junction to Cardiff Radyr Branch Junction via City Lines
GW850	Leckwith Loop North Jn to Leckwith Loop South Jn
GW860	Penarth Curve North Jn to Penarth Curve South Jn
GW864	Cogan Junction to Penarth
GW870	Barry to Bridgend Barry Junction (Vale of Glamorgan Line)
GW874	Bridgend Llynfi Junction to Maesteg
GW875	Tondu Junction to Garw Loop

GW877	Tondu to Port Talbot Docks (Ogmore Vale Extension Line)
GW890	Court Sart Junction/Up Flying Loop Junction to Morlais Junction (Swansea District Line)
GW8901	Dynevor Junction to Jersey Marine Junction South
GW892	Cwmgwrach to Burrows Sidings
GW893	Onllwyn to Neath and Brecon Junction
GW894	Jersey Marine Junction North to Jersey Marine Junction South
GW897	Grovesend Colliery Loop Junction to Hendy Junction
GW900	Pilning to Fishguard Harbour
GW9001	Landore Junction to Swansea
GW906	Swansea Loop East Junction to Swansea Loop West Junction
GW910	Craven Arms Junction to Llandeilo Junction (Central Wales Line)
GW915	Gwaun-cae-Gurwen to Pantyffynnon
GW930	Carmarthen Station to Carmarthen Junction
GW940	Carmarthen Station to Carmarthen Bridge Junction
GW950	Whitland to Pembroke Dock
GW960	Clarbeston Road to Milford Haven
GW970	Gulf Oil Branch Junction to Waterston Gulf Oil Refinery
GW980	Herbrandston Junction to Robeston Amoco Sidings
NW3001	Saltney Jn to Holyhead
NW3007	Wrexham Central to Neston
NW3015	Llandudno Junction to Blaenau Ffestiniog
NW3017	Llandudno Junction to Llandudno

1.2 Sectional Appendices and Rule Book

1.2.1 Sectional Appendix

The Sectional Appendix to the Working Timetable and Books of Rules and Regulations shall be used.

The Sectional Appendix is the sole source of information regarding the following:

Electrification limits refer to relevant Table 'A'

Permissive Working refer to relevant Table 'A', then see below.

Route Clearance refer to 'tab' associated with relevant Table 'A'

To identify the type of Permissive Working that applies at a given location refer to the appropriate Sectional Appendix Table A for that location. If there is authority for Permissive Working, this will appear in the Signalling and Remarks. There are different authorities that depend upon the signalling and layout of the location. The following list identifies the types of Permissive Working that will appear in the Sectional Appendix.

Type	Description
PP	Permissive Working – full use for class 1, 2, 3 ECS, 5, 9 and 0 trains
PP – A	Permissive Working – Attaching and Detaching use only for class 1, 2, 3 ECS, 5, 9 and 0 trains
PP – C	Permissive Working – Contingency use only for class 1, 2, 3 ECS, 5, 9 and 0 trains
PP – S	Permissive Working – Platform Sharing use only for class 1, 2, 3 ECS, 5, 9 and 0 trains
PF	Permissive Working for class 3 to 8 and 0 trains

Source: Sectional Appendix – General Instructions – National – Explanation of Table A terms and symbols

1.2.2 Rule Book

The following Modules of the Rule Book GE/RT8000 affects all sections unless specified. The sections listed affect railway operations and train movements. The listed section does not apply to Train Planning directly, but its application will affect how trains operate, and it is for that reason the item appears here.

RULE BOOK MODULE	SECTION	NOTES
G1 General safety responsibilities and personal track safety for non-track workers	5.5 Using the phonetic alphabet;	Operational principles
OTM Working of on-track machines (OTM)	2.2 Before starting a journey	TPR Section 4.6
	5.6 Carrying out a running brake test	TPR Section 5.1.2
P1 Single line working	6.5 Warning anyone working on or near the line used for single line working	When planning Single Line Working
	9.3 Right-direction movements	
	9.4 Wrong-direction movements	
S1 Signals and indicators controlling train movements		Operational principles
S2 Observing and obeying fixed signals	3.1 Passenger train at a position-light, shunt-ahead or shunting signal	Operational principles
SP Speeds	2.4 Differential permissible speed indicators	TPR Section 5.1.2
	2.5 Permissible speed indicators with letters	TPR Section 5.1.2

RULE BOOK MODULE	SECTION	NOTES
	2.6 Enhanced permissible speed (EPS) indicators	TPR Section 5.1.2
T11 Movement of engineering trains and on-track plant under T3 arrangements	3 Movements entering the possession	When planning trains entering possessions
	7 Instructing the driver or machine controller	When planning trains entering possessions
TW1 Preparation and movement of trains General	7.1 Authority and arrangements for movements (Hauling dead traction units)	Operational principles
TW2 Preparation and movement of multiple-unit passenger trains	6.5 Carrying out a running brake test	TPR Section 5.1.2
TW3 Preparation and movement of locomotive hauled trains (including HSTs, push-pull, postal, parcels)	2.1 Locomotives running light or hauling trains (Maximum speed of);	TPR Section 5.1.2
	2.2 Maximum permitted speed of locomotive-hauled trains	TPR Section 5.1.2
	2.3 Electric-traction speed restrictions	TPR Section 5.1.2
	3.16 Carrying out a running brake test	TPR Section 5.1.2
	Section 14.1 Working trains with locomotives at both ends, when this type of working is permitted	Operational principles
Rule Book Handbook 5 Handsignalling Duties	Section 5.2 Entrance signal	When planning Temporary Block Working (TBW)
	5.3 Exit signal	When planning Temporary Block Working (TBW)
	5.4 Where TBW is divided into two sections	When planning Temporary Block Working (TBW)

1.3 Definitions

The list below is not an exhaustive one but is intended to give readers an understanding of some of the terminology as used for the purposes of this document.

If any term in Timetable Planning Rules is unclear please contact the compiler on the telephone number shown on the cover.

1.3.1 Train Classification

Classification	Description
1	Express passenger train; or Nominated postal or parcels train; or Breakdown or overhead line equipment train going to clear the line or returning from there (1Z99); or Traction unit going to assist a failed train (1Z99) Snow plough going to clear the line (1Z99)
9	A train formed of a Class 373 unit or other passenger train if specially authorised
2	Ordinary passenger train; or Breakdown or overhead line equipment train not going to clear the line (2Z99) Officers' special train (2Z01)
3	Freight train which can run at more than 75 mph; or A parcels train; or Empty coaching stock train if specially authorised ; or a Network Rail Infrastructure Monitoring Train (3Qxx)
4	Freight train which can run up to 75 mph
5	Empty coaching stock train
6	Freight train which can run up to 60 mph
7	Freight train which can run up to 45 mph
8	Freight train which can run at, or is timed to run at, 35 mph or less
0	Light locomotive or locomotives

Source: The Rule Book GE/RT8000/TW1 Preparation and Movement of Trains General Section 2 Classification and speed of trains

1.3.2 Days of Operation

The following abbreviations are used to identify the day or days that a train operates.

Abbreviation	Description
M	Monday
T	Tuesday
W	Wednesday
Th	Thursday
F	Friday
S	Saturday
Su	Sunday
EWD	Every Week Day (Monday to Saturday)
Daily	Every day – Integrated Train Planning System (ITPS) will not accept this; there must be a separate entry for Sundays.
Suffixes	
O	Adding this indicates that the train will run only on that day or those days shown
X	Adding this indicates that the train will not run on that day or those days shown
General	
BHX	Denotes that this train does not run on a bank holiday

1.3.3 Traction and Rolling Stock

Abbreviation	Description
15X	DMU classes 150/153/155/156/158/159
17X	DMU classes 170/171/172 and 175
22X	DMU classes 220/221/222
230	DMU Class 230
769	Bi-mode class 769
80X	Bi-mode classes 800/802
Castle	"Mini HST" GWR 2+4 HST
DMU	Any diesel multiple unit (incl. GWR Castle Class (HST) & 769 in diesel mode) (excluding classes 180/22X)
EMU	Any electric multiple unit (incl. 769 in electric mode)
ECS	Empty Coaching Stock includes empty diesel and electric multiple units.
HST	Trains consisting of two Class 43 locomotives and Mk 3 passenger vehicles (except for GWR (HST) Castle class)
LH	A passenger or parcels train hauled or propelled by one or more locomotives
LHCV	Locomotive hauled coaching vehicles
Power	Passenger stock equipped with power operated external doors
Power Door DMU	Class 142, 143, 144, 150, 153, 156, 158, 159, 165, 166, 168, 170, 171, 172, 175, 180, 220, 221, 222

1.3.4 Line Codes

Abbreviation	Description
-	Default Line Code as indicated in Section 2.1
1	Line 1
2	Line 2
3	Line 3
4	Line 4
5	Line 5
6	Line 6
A	Line A
AB	Line A to Line B
B	Line B
BAY	Bay Line
C	Line C
CL	Carriage Line
D	Line D
DB	Down Bletchley
DBL	Down Bromsgrove Loop
DFR	Down Feeder Relief (Reading)
DGL	Down Goods Line
DH	Down Airport (Heathrow Airport Jn to T2&3 and Down T5, Heathrow T2&3 to Heathrow T5 (both for Up direction working)) Down Holyhead (for reversible running)
DHR	Down Airport Relief (Stockley Jn 8210 points) to Heathrow Tunnel Jn (for Up direction working)
DJ	Down Jericho (Oxford)
DK	Down Kemble
DL	Down Line/Loop
DM or DML	Down Main
DNL	Down Newbury Loop
DOX	Down Oxford
DPL	Down Passenger Line/Loop
DRL	Down Relief Line

DT	Down Tunnel
DW	Down Westbury
DWL	Down Westbury Line
E	Line E
ECL	Engine & Carriage Line
FVL	Festival Line (Reading)
GL	Goods Line
ML	Main Line
RCL	Reception Line
RL	Relief Line
RL1	Reception Line 1
RL2	Reception Line 2
RVL	Reversible Line
TL	Through Line
UB	Up Bletchley
UDR	Up and Down Relief
UFM	Up Feeder Main (Reading)
UGL	Up Goods Line
UH	Up Airport (Up T5, Heathrow T5 to T2&3 and Up Airport Heathrow T2&3 to Heathrow Tunnel Jn (both for Down direction working) Up Holyhead (for reversible working)
UK	Up Kemble
UL	Up Line
UM or UML	Up Main
UOX	Up Oxford
UPL	Up Passenger Loop/Line
UR	Up Reception
URL	Up Relief Line (including Up Airport Relief Heathrow Airport Jn to Stockley Jn 8211 points for Down direction working)
UT	Up Through/Tunnel
UWC	Up West Curve
WDL	West Drayton Loop
WL	Westbury Line

1.3.5 Activity and Other Codes

Abbreviation	Description
-D	Train stops to detach vehicles
-T	Train stops to attach and detach vehicles
-U	Train stops to attach vehicles
A	Train stops or shunts for other trains ahead or to pass only. Shows as an * in WTT
AE	Trains stops to attach/detach assisting locomotive.
BL	Train stops to attach or detach a banking locomotive
C	Train stops to change train crew
D	Train only stops to set down passengers. Shows as an s in NRT
E	Train stops for examination
G	NRT data to add
H	Notional Activity to prevent WTT column merge
HH	As H, were there is a third column involved
K	Passenger count point
KC	Ticket collection and examination point
KE	Ticket examination point
KF	Ticket examination point – 1 st Class only
KS	Selective ticket examination point
L	Train stops to change locomotives

N	Stop not advertised to the public
OP	Train stops for other operating reasons
OR	Train locomotive on rear of train
PR	Train propelling between points shown
R	Train stops when required. Shows as an x in NRT
RM	Trains stops for a reversing movement or driver to change ends
RR	Train stops to allow the locomotive to run-round its train
S	Trains for railway personnel only
T	Trains stops to pick up or set down passengers
TB	Train begins (Origin)
TF	Train finishes (Destination)
TS	Detail consist for TOPS Direct requested by DB Cargo
TW	Train stops to pick up or set down a staff, tablet or token on Single Lines. See Section 5.2
U	Train only stops to pick up passengers. Shows as a u in NRT
W	Train stops for watering of coaches
X	Train passes another train at crossing point on single line. See Section 5.2

Activity Codes – Notes
1. Any passenger train that stops at a location automatically generates a T Activity unless it is suppressed.
2. If an Activity is required that removes the 'passenger stop' Activity (T, D, U and R), then the 'passenger stop' Activity must always appear in the first Activity field (e.g. T –D would be correct, –D T would not). This is because the National Rail Timetable (NRT) extract program only considers the first Activity field. If it does not find a 'passenger stop' Activity in the first field the time will not be extracted to appear in the NRT.
3. Up to 6 Activities may be shown for each event.
4. No two Activities may be duplicated at the same event.
At any one event, the following groups are mutually exclusive:
a) D, U, T, N, S, TW, OP.
b) –D, –U, –T.
c) TB, TF.
d) KC, KE.
6. N, R, G, D and U are only valid with Train Categories XC, XD, XI, XX, XZ, OO, OW, OL, BS, BR and blank (i.e. 'advertised' services).
7. K, KC, KE, KF, KS are only valid with Train Categories starting X or O.
8. If TF is present then none of K, KC, KE, KF, KS can be present.
9. Activity T indicates that a train stops to pick up and set down. This normally refers to passengers. Activity –T indicates that the train stops to attach and detach vehicles. At any location where a 'stop' time is shown, TPS or a similar system will assume a default Activity is required unless otherwise specified. These default Activities are as follows: T for trains with a Train Category starting in X or O, OP for trains with a Train Category starting in Z or E, and –T for all other trains (but see below). The default Activity will be generated when the upload file is created.
10. If Activities U, D, N, R, OP, S, TW, –U or –D are specified then this overrides the defaults and only the specified Activities will be included in the upload file.

2 Route Description

2.1 Planning Geography

Network Rail maintains the planning geography and issues it to Train Operators using the BPlan system. BPlan data is to be regarded as the master geography and it is the responsibility of Train Operators and nominated Network Rail users to ensure that data in their train planning systems reflects the master geography.

It is essential that all locations, times and full details such as platforms, running lines, activities, etc. comply fully with all of the following rules. Any Network Links used for buses only are to have running line defined as BUS. All data used by a specifier must be that supplied by Network Rail: use of estimated times added or amended locally will cause the trains concerned to fail validation.

In order to avoid the creation of unnecessary journey legs and associated point-to-point timings, all passing times must conform to these rules.

Locations in bold type are mandatory timing points.

Locations in normal type are non-mandatory timing points.

Locations in italic type are not timing points but are shown for reference purposes.

Line references shown in brackets e.g. (LN656) are only for reference purposes.

In the tables below, the following codes apply:

- | | |
|---|--|
| F | Only freight trains are timed here |
| P | Only passenger trains are timed here |
| S | Only stopping trains are timed here |
| X | Only trains crossing from one running line to another are timed here |

Llandudno		–		Platform detail must be shown

2.2 Route Opening Hours

Subject to constraints imposed by the Engineering Access Statement all routes are open continuously, except as shown below. The hours shown reflect the contractual opening hours. The actual opening hours may vary from those shown. For a complete listing of current signal box opening hours please refer to the “Compendium of Signal Box Opening Hours” which can be found on the Network Rail website - <http://www.networkrail.co.uk/aspx/3741.aspx> If there is doubt about a signal box’s opening hours check with the appropriate Network Rail Operations Manager.

When the routes shown are required for services diverted under the Engineering Access Statement opening hours will be increased as necessary on a temporary basis.

Signal boxes equipped to be switched-out during a route’s opening hours are shown within the routes concerned.

PLT denotes passage of last train.

GW103 PADDINGTON TO UFFINGTON

Note: Acton Canal Wharf Signal Box is closed between 07:00 and 19:00 hrs on Sundays. The following routes are not available during these periods: Trains linking with the West Coast Main line via EA1310, EA1360 and MD170 (via Acton Canal Wharf Junction cannot run during this period; Links to the Midland Mainline in both directions via EA1310 and EA1360 to and from both Brent Curve Junction and Cricklewood Junction are also unavailable at the same time).

GW108 FORDGATE TO PENZANCE

ROUTE SECTION	SX	SO	SUN
Fordgate to Penzance	Open continuously	Open continuously	Open continuously
The following signal box is equipped to be switched-out, opening hours are:			
St. Erth	0630 – 2330	0630 – 2330	0830 – 2230 Summer 1130 – 2045 Winter

GW310 WOLVERCOTE JUNCTION TO NORTON JUNCTION

ROUTE SECTION	SX	SO	SUN
Wolvercote Junction to Ascott - under - Wychwood	FSX 0505 – 0010 FO 0505 – 0000	0000 – 0010 (Sun)	0900 - 0010
Ascott - under - Wychwood to Moreton in Marsh	FSX 0515 – 0010 FO 0505 – 0000	0000 – 0010 (Sun)	0900 - 2355
Moreton in Marsh to Evesham SB	0515 – 0010	0515 – 0010	0900 - 0010
Evesham SB to Norton Junction	0515 – 0010	0515 – 0010	0900 - 0010

GW317 HONEYBOURNE NORTH JUNCTION TO LONG MARSTON\$\$

ROUTE SECTION	SX	SO	SUN
Honeybourne North Jn to Honeybourne Staff Hut (Start of One Train Working)	0515 – 0010	05:15 – 0010	0900 – 0010
Honeybourne Staff Hut (Start of One Train Working) to Long Marston	0800 – 1730*	Closed*	Closed*

GW317 HONEYBOURNE NORTH JUNCTION TO LONG MARSTON

ROUTE SECTION	SX	SO	SUN
	* Outside these hours the FOC bidding for the train must agree with the terminal operator that the train can access the terminal yard and confirm to NR that these arrangements are in place.		

GW340 WORCESTER SHRUB HILL TO SHELWICK JUNCTION

ROUTE SECTION	SX	SO	SUN
Worcester Shrub Hill to Henwick	Continuous	Continuous	00:10 (closes) 08:00 (opens)
Henwick to Newland East	0510 – 0000	0510 – 0000	0830 – 2335
Newland East to Malvern Wells	0510 – 0000	0510 – 0000	0830 – 2330
Malvern Wells to Ledbury	0500 – 2350	0500 – 2350	0830 – 2330
Ledbury to Shelwick Junction	0450 – 2340	0450 – 0000	1210 – 2325

GW350 WORCESTER TUNNEL JUNCTION TO HENWICK

ROUTE SECTION	SX	SO	SUN
Worcester Tunnel Junction to Henwick	Continuous	Continuous	0040 (closes) 0800 (opens)

GW370 DROITWICH SPA TO CUTNALL GREEN

ROUTE SECTION	SX	SO	SUN
Droitwich Spa to Hartlebury	Continuous	Continuous	0040 (closes) 0800 (opens)

GW4501 STOKE GIFFORD JUNCTION TO BRISTOL BULK HANDLING TERMINAL

ROUTE SECTION	SX	SO	SUN
Stoke Gifford Junction to Bristol Bulk Handling Terminal	0000 - 2400	0000 - 2200	0600 – 2400

GW451 FILTON JUNCTION TO FILTON WEST JUNCTION (FILTON CHORD)

ROUTE SECTION	SX	SO	SUN
Filton Junction to Filton West Junction	0000 - 2400	0000 - 2400	06:00 – 00:00

GW454 SEVERN BEACH TO NARROWWAYS HILL JUNCTION

ROUTE SECTION	SX	SO	SUN
Clifton Down to Severn Beach	0000 - 2400	0000 – 0100 Sun	06:00-00:00

GW540 FILTON WEST JUNCTION TO PATCHWAY JUNCTION (PATCHWAY CHORD)

ROUTE SECTION	SX	SO	SUN
Filton West Junction to Patchway Junction	0000 - 2400	0000 - 2200	0600 - 2400

GW580 EAST SOMERSET JUNCTION TO CRANMORE

ROUTE SECTION	SX	SO	SUN
Whites Crossing to Cranmore	Open as required by East Somerset Railway	Open as required by East Somerset Railway	Open as required by East Somerset Railway

GW606 COWLEY BRIDGE JUNCTION TO BARNSTAPLE

ROUTE SECTION	SX	SO	SUN
Cowley Bridge Junction to Barnstaple	0545 – 2300 FSX 0545 – 0000 FO	0000 - 0100 0545 - 2300	0840 -2240

Wrexham Central to Neston	Open continuously	Open continuously	Open continuously
The following signal box is equipped to be switched-out. Opening hours are:			
	SX	SO	SUN
Penyffordd	0630 – 2130	0630 – 2130	1200 – 2000 for TfW enhanced service to operate

3 Electrification

3.1 Electrification Limits

Limits of the 25 kV AC and 750V DC electrification systems are contained in Table A of the Sectional Appendix to the Working Timetables, issued by, Network Rail. Refer to Table A for the given location to identify the type of electrification that applies.

3.2 Electrification Supply Restrictions

Under normal conditions, the electrification power supplies will not place any restrictions on the use of approved electric traction. However, the Route Clearance sections of the Sectional Appendix to the Working Timetables, issued by, Network Rail do tabulate restrictions on the movement of electric trains. Refer to Table A and select Route Clearance.

Under maintenance conditions, certain sections of the electrified network may be blocked to electric traction. These restrictions are contained within the Network Rail Engineering Access Statement for the appropriate year. Additional restrictions may also arise in connection with engineering possessions requested through the Engineering Access Statement amendment procedure.

4 Rolling Stock Restrictions

4.1 Locomotive Route Availability

See the applicable Route Clearance table for the given location in Sectional Appendix to the Working Timetables, issued by Network Rail. Refer to Table A, and select Route Clearance.

4.2 Passenger Stock Restrictions

See the applicable Route Clearance table for the given location in Sectional Appendix to the Working Timetables, issued by Network Rail. Refer to Table A, and select Route Clearance.

4.3 Freight Wagon Restrictions

See the applicable Route Clearance table for the given location in Sectional Appendix to the Working Timetables, issued by Network Rail. The Route Availability for a given location is in the 'Signalling and Remarks' column of Table A. Route Clearance Table D5 Route clearance of freight vehicles gives further guidance on freight wagon restrictions.

Trains conveying vehicles that have a heavy axle weight or other exceptional characteristics, or vehicles conveying containers or swap bodies require an RT3973 form.

Note: The Rule Book GERT8000 Section TW4 of defines a container as an intermodal transport unit constructed to a standard (usually specified by the ISO) suitable for conveyance by road, rail or sea.

Note: The Sectional Appendix does not cover the CTRL HS1. The CTRL has its own Working Manual.

4.4 Freight Train Load Limits

Trailing load limits for all traction types are contained in the Freight Loads Book published by Network Rail.

Note: It is important to understand the weight limitations that apply to trains especially over sections of heavily graded routes. Coupling strength information is also contained in the a). Coupling strength is important in determining the trailing loads that trains can convey.

4.5 Freight Train Length Limits

Refer to the Freight Train Loads Book published by Network Rail for the length limits of freight trains.

Note: The Sectional Appendix quotes loop lengths in metres and feet. These are the absolute lengths of the loop from the signal at the outlet to the fouling point at the entrance to the loop.

4.6 Engineers' Trains Restrictions

Some On Track Machines (OTMs) do not reliably activate track circuits. These OTMs must use one of the following special reporting numbers 6Z09, 7Z09 or 8Z09*. Because these OTMs do not reliably activate track circuits it is not possible to apply the headways and junction margins as outlined in Timetable Planning Rules consistently and it is therefore not possible for Capacity Planning to provide timings for these movements.

* Source GE/RT 8000-OTM

5 Running Times, Margins and Allowances

Except where otherwise stated, the information in this section of the Timetable Planning Rules reflects the general rules used in developing the 1994/5 timetable (Several exceptions to the general rules were agreed for 1994/5 and exceptions may continue to be possible with the specific agreement of Network Rail in every case.)

5.1 Sectional Running Times

The definition for Sectional Running Times (SRTs) is listed in Section 6.4 of the National TPRs.

5.1.1 Source of Current SRTs

The definitive catalogue of SRTs is BPlan.

5.1.2 Method of Calculation

SRTs are revised by Train Operators and Network Rail as part of the Revision of Timetable Planning Rules process outlined in Network Code Part D 2.2. Normally they will not change from one timetable to the next. Network Rail will, however, re-calculate SRTs for particular train/route combinations in the following circumstances:

- i) Where a Train Operator anticipates using a train/route combination for which no suitable SRTs exist;
- ii) Where Network Rail anticipates a change to route data, e.g. line speed changes;
- iii) Where there is evidence that the SRTs in current use do not adequately represent real train performance;
- iv) Where it is cost-effective to re-calculate all SRTs on a route at the same time as a re-calculation for a particular train type.

Network Rail will reflect the methodology and assumptions described in Section 6 of the National TPRs when calculating TPR proposals, unless and to the extent documented otherwise in respect of any given proposal. Timetable participants are encouraged to submit change proposals for review and consultation in line with the national methodology, or in line with such alternative methodology and assumptions as favoured by the proposer. NR will not seek to reject any proposal on the exclusive basis of the methodology employed, provided that the methodology and assumptions are clearly stated and demonstrably adhered to in respect of the proposal received.

SRT change proposals may be calculated in a number of ways including, but not limited to:

- a) Through actual timing of trains
- b) Use of On Train Monitoring Recorder (OTMR) systems
- c) Use of computer system actual values
- d) Use of computer simulation tools
- e) By any other agreed methodology

It is permissible to include percentage uplift in SRTs instead of applying engineering recovery allowances to be agreed by all affected parties.

In the event that the application of different methodologies produces conflicting proposals, a joint observation exercise should be undertaken to ascertain what happens in reality.

5.1.3 New and Revised Sectional Running Times

New and revised SRTs are revised by Train Operators and Network Rail on an individual basis. These should be supplied by applying the methodology described in Section 6 of the National TPRs unless another methodology is deemed appropriate, provided that the methodology and assumptions are clearly stated and demonstrably adhered to in respect of the proposal received.

5.1.4 Timing of Trains Consisting of Passenger Vehicles on Goods Lines

The sectional running timings quoted for trains consisting of passenger vehicles on Goods Lines reflect the speeds shown in the relevant Table 'A' of the appropriate Sectional Appendix. They do not constitute an authority to time trains conveying passengers on a Goods Lines. Nor do they reflect the permitted speeds at which a train conveying passengers can proceed. Network Rail will offer the sectional running times for trains conveying passengers on a Goods Line on a train-by-train basis. For those times please apply to Capacity Planning.

Operations Publications publish the authority to allow the planned operation of trains conveying passengers on Goods Lines. Before Operations Publications can grant authority they require confirmation that the track is fit for purpose and that there is a safe method of operation. Therefore-Capacity Planning must apply to the relevant Track Engineer and Operations Manager for confirmation of these requirements in writing. Capacity Planning must pass these responses to Operations Publications. Capacity Planning is responsible for advising Operations Publications of the requirement to operate a passenger train on a Goods Line at least 8 weeks before the day of operation.

5.2 Headways

The definition for Headways is listed in Section 6.5 of the National TPRs.

5.2.1 Headway Values

All times are in minutes. All routes are shown.

Where track circuit block (TCB) signalling applies, the standard headways for each route are shown, together with any exceptions.

AB indicates locations where absolute block signalling applies: here the headway is to be calculated from the transit time of the first of each pair of trains running between the consecutive block posts being considered. To this transit time shall be added 2 minutes to allow for the signaller's actions. Exceptions are shown as AB and appear together with the actual headway value to be used, which includes the allowance for signallers' actions. Where there is an intermediate block signal, the absolute block section concerned shall be between this signal and the next block post in advance.

Single lines and other forms of signalling are shown, together with any values applicable, where they occur.

'OTNS' or 'OT' indicates One Train Working with No Train Staff; 'OTS' or 'OT(S)' indicates One Train Working with Train Staff. 'NST' indicates No Signaller token. In these cases only one train is allowed in the section at one time; a second train cannot be allowed to enter the section until the first train has left the section.

'ETB' indicates Electric Token Block, and 'TB' indicates Tokenless Block for single lines.

'RB' indicates Radio Signalling where 'Long Section Tokens' can be issued between certain block posts during times of low traffic volume.

Light Engine movements to be treated as passenger trains when applying margins/ allowances where there is a freight/ passenger difference.

REDUCED HEADWAY FOR A TRAIN FOLLOWING FROM A STAND			
Route Section	Margin		
First train speed passing the loop	50 – 55 mph	60 – 95 mph	100 – 125 mph
Headway			
2	1.5	1.5	1.0
3	2.5	2.0	1.5
4	3.0	2.5	2.0
5	4.0	3.0	2.5
6	4.5	4.0	3.0
7	5.5	4.5	3.5
8	6.0	5.0	4.0
9	7.0	5.5	4.5
10	7.5	6.0	5.0
Note this does not apply in absolute block areas.			
Note the normal headway applies at the next mandatory timing point.			
Note this shall not apply where the preceding train has an intermediate calling point before the next mandatory timing point.

Penyffordd to Dee Marsh Junction Signal Box	AB	AB	
Dee Marsh Junction Signal Box to Bidston West Junction	TCB*	TCB*	* TCB planned as AB

5.2.2 General Capacity Constraints

Where single line working is to operate or trains are to be routed to run on a line other than that normally planned for them, constraints on capacity will apply – see Engineering Access Statement.

The following special capacity and timing restrictions apply in addition to the constraints stated elsewhere in this document:

Network Rail intends to restrict planned usage to 90% of capacity, according to the following criteria:

- (a) Headways used are strict minimum headways.
- (b) Period of time measured is a minimum of half an hour.
- (c) Capacity is measured over a signal block section, through a junction, through a platform or on a single line section.

EXCEPTIONS :-

- (i) Where usage already exceeds 90% capacity, businesses will be permitted to retain existing paths but will be encouraged to move trains away from the critical period where there are acceptable cost/customer considerations. If a business relinquishes a path in the critical period, other businesses would not be able to re- occupy the path (see ii).
- (ii) If a business wishes to run an additional train/s in the critical period, that request will be tabled for discussion. Normally, additional trains that breach the 90% level will not be accepted, but in exceptional circumstances it may be agreed provided all parties acknowledge the performance risks.

These restrictions will apply on the following route sections :-

GW103 PADDINGTON TO UFFINGTON

Between Paddington and Reading in both directions.
--

GW105 UFFINGTON TO FORDGATE VIA BOX
--

Between Bathampton Jn and Bristol Temple Meads in both directions.
--

GW900 PILNING TO FISHGUARD HARBOUR

Between Pilning and Severn Tunnel Junction.

NW3001 SALTNEY JUNCTION TO HOLYHEAD
--

Steam Hauled services must be timed over Conwy Tubular Bridge 30 minutes prior to a booked service to allow a full inspection of the structure to take place prior to the passage of the next booked service.

5.3 Junction Margins and Station Planning Rules

The definition for Junction Margins and Station Planning Rules is listed in Section 6.6 - 6.10 of the National TPRs.

All times shown are in minutes. Where adjustments to sectional running times are shown, the value must be added to the normal SRTs shown in B Plan. Negative adjustments are specially identified.

Minimum station allowances are the minimum practical for the particular type of stock. These are shown with exceptions being listed by line of route where applicable.

Light Engine movements to be treated as passenger trains when applying margins/ allowances where there is a freight/ passenger difference.

STANDARD VALUES – MINIMUM	
Adjustment to Sectional Running Times A ½ minute adjustment should be included in all trains* approaching the termination point, where otherwise the terminating time would include an odd half-minute. *except at London Paddington to allow trains to run at 2½ minute headways if required, and except at Twyford and Henley (for self-contained Henley Branch services ONLY), to enable a half-hourly service frequency.	
Brake Testing Great Western Railway 80X services originating from the locations listed below, have an additional ½ minute included in the sectional running time between the origin and first stop, for brake testing. Any GWR 80X service originating from a location not listed below requires an additional ½ minute adjustment allowance between the origin and an appropriate TIPLOC <i>before</i> the first stop. An appropriate TIPLOC should be interpreted as one by which the train can reasonably be expected to exceed 40mph.	
Locations with ½ minute brake test included in SRT Oxford (up direction), Bristol Temple Meads (up direction towards Bath Spa), Great Malvern (up direction), Cheltenham Spa (towards Barnwood Jn), Exeter St.Davids (up direction), Paignton, Plymouth, Newquay, Penzance, Newport (up direction), Cardiff Central, Swansea, Carmarthen (up direction), and Pembroke Dock.	
Allowance to unlock a portion of train formation in service	
DMU (165/166)	6
Allowance to lock a portion of train formation in service	
DMU (165/166)	5 (lock 2-3 cars)
DMU (165/166)	6 (lock 4 cars)

Up to 103 SLUs	9½	6	4½	4	4	3½	3	3	3	3	2½			
Times shown are for the second movement														
Loco Change Allowance			12 (NW routes)											
Locomotive Run Round – GW routes														
Passenger			10											
Freight			20											
Locomotive Run Round – NW routes														
Passenger			15											
Freight			20											
Minimum platform allowance before departure for a Class 22x after arriving ecs from depot														
1 x 22x			15											
2 x 22x			20											
Minimum platform standing allowance before passenger train departure of CrossCountry HST / 22x after arriving ECS from depot (train preparation reasons)														
1 x 22x departing in same direction as arrival								8						

STANDARD VALUES – MINIMUM

1 x 22x departing in reverse direction to arrival	10
2 x 22x departing in same direction as arrival	15
2 x 22x and HST departing in reverse direction to arrival	20

Minimum allowance for the second Class 165/6 or 170 unit to depart after detaching under D.O.O. operation

Second train departs after first	5 minutes
----------------------------------	-----------

Pathing Rule – GW routes

Where pathing time is unavoidably imposed between stopping points due to conflict at a junction a restart allowance must be inserted in the timing section after the conflict point as shown in the table below.

Note:- Pathing time must not be applied approaching ARS controlled junctions where a restart allowance would be incurred as it will be ignored by ARS. This causes the route to be set too early creating delay to any preceding train planned ahead on minimum junction margin. Any pathing required should be inserted at the preceding dwell point.

Line Speed	Restart allowance in minutes					
	< 80 mph	80 mph	90 mph	100 mph	110 mph	125 mph
Pathing time \$						
< 2	0	0	0	0	0	0
2	0	0	0	0	0	1
2 ½	0	0	0	½	1	2
3	0	0	½	½	1½	2
3 ½	0	½	1½	1½	2½	3
≥4	½	1	2	2	3	3½

\$ Aggregated pathing time including engineering box time and any other allowances after the last stopping point

Pathing Rule (Freight) – GW routes

Where pathing time is inserted into freight trains between stopping points, the freight train must be deemed to have stopped at the next timing point and must be re-started using a start to (stop / pass) SRT, from the point of conflict.

Platform End Conflicts	Trains may arrive 1 minute before or 3 minutes after a departure Except for Westbury, Exeter St David's and Plymouth where 2 before or 3 after applies.
------------------------	--

Platform Re-occupation – NW routes

Following EMU/DMU in same direction	3
Following EMU/DMU in opposite direction	5
Following LH/HST in same direction	4
Following LH/HST in opposite direction	6

Reversal – GW routes

22X	5
22X formed of 2 sets	6
GWR West DMU (143-166)	3 for up to and including 3 coaches

	4 for 4 coaches or above (may be reduced to 3 if a second driver is diagrammed)
DMU (142 to 159) – (non GWR)	3

HST	7
New Measurement Train	7
DVT	8* Only applies to services operating in DVT mode. * can be reduced to 5 if a change of traincrew is involved

Train Crew Change Allowance

2 (NW routes)

Turnround Allowances in General – GW routes

At each stage of timetable development, turnrounds will not be planned for a shorter time than the minimum times shown here unless agreed by the Network Rail Operational Planning Project Manager and appropriate Business Manager.

Where an Operator wishes to specify a turnround at a location where no minimum is specified in this document, this shall be subject to the agreement of the Route Operational Planning Manager and appropriate Business Manager

Turnround Allowances

MTR Crossrail services	7
------------------------	---

Turnround Allowances On Branch Lines – GW routes

The turnround margins at either end of the branches listed below must be a minimum of 3 minutes. In the branch working however there must be no more than three consecutive 3-minute turnrounds.

- Falmouth Branch
- Gunnislake Branch
- Looe Branch
- Severn Beach Branch
- St. Ives Branch
- Maesteg Branch

STANDARD VALUES – MINIMUM

STANDARD VALUES – MINIMUM	
Turnround – NW routes	
Minimum Turnround	10
LH/HST	15 For new services, a turnround time of 10 minutes per hour of journey time should be taken as a guide.
MU	4 But no more than 3 successive 4 minutes turnrounds followed by an additional 10 minutes.(10 minutes applies to diagrams and not stations) For new services, a turnround time of 10 minutes per hour of journey time should be taken as a guide.
Virgin West Coast Services	60 At Holyhead (for Class 390) 30 At Holyhead (other than class 390) 20 At all locations for train entering passenger service after an ECS move or an ECS move following a train leaving passenger service.

THE FOLLOWING PAGES SHOW-THE EXCEPTIONS TO THESE STANDARD VALUES

GW103 PADDINGTON TO UFFINGTON

Paddington

Connectional Allowance	15
-------------------------------	----

Adjustment to Sectional Running Time (to be shown on the approach to Paddington)

Movement	Reason	Timing Load	Value
Trains that are planned to enter a platform that is already occupied		All traffic	+ {1}

Pathing approaching Paddington

Pathing time must not be applied approaching Paddington, when providing a margin with a conflicting departure. ARS will not read the pathing time, and a conflict will be created. Pathing time should be inserted approaching Royal Oak Jn to achieve such a margin.

Platform End Conflict Margins

First Movement	Second Movement	Margin
Arrival	Conflicting Departure	1
Departure	Conflicting Arrival	4 – giving a margin of 2 minutes at Royal Oak Jn

Paddington Terminal Allowances: -

Inbound train (In passenger service)	Margin before departure to Depot
80x (9/10 car)	10 minutes
80X (5 car)	7 minutes
L/H	15 minutes
DMU	5 minutes
EMU	5 minutes #
# 7 minutes for an 8 or 9 car EMU unless a replacement driver is provided.	
Inbound train Depot	Margin before departure from Paddington (in passenger service)
80x (9/10 car)	15 minutes
80x (5 car)	10 minutes
L/H	15 minutes
DMU	10 minutes
EMU	5 minutes #
# 7 minutes for an 8 or 9 car EMU unless a replacement driver is provided.	

The above minimum times are acceptable to Network Rail; individual Train Operating Companies may require longer periods to achieve commercial objectives, subject to a maximum of 45 minutes at peak times & 60 minutes at off peak times. These maximum times may not be exceeded unless agreed to in writing by the Network Rail Operational Planning Project Manager.

Peak times at Paddington are defined as 07.30 to 11.00 and 16.00 to 19.30 Mondays to Fridays.

Note: These maximum times do not apply to Sleeper services to & from Penzance.

Minimum Turnround

	L/H	Power door DMU & 769	EMU	Class 80X (5 car)	Class 80X (9/10 Car)
From Aylesbury		7			
From Banbury		20		15	15

§ 5 minutes for a 4 or 5 car train or an 8 or 9 car train, with a change of driver.

4 minutes permitted with a change of Driver

Platform Re-occupation

Platforms 1 to 11 inclusive	5 (Can be reduced to 4 by agreement from OPPM)
Platforms 12 & 14	4

Two DMU, 80x-5 or electric trains arriving in the same platform must be timed to arrive four minutes or more apart except when both trains are booked to run relief line from west of Ealing Broadway the minimum space between arrival of the first and second trains may be reduced to three minutes.

When two DMU, 80x 5 car DOO or electric trains are booked to depart from the same platform in the same direction the second **must** not be timed to depart less than five minutes after the first train to enable DOO procedure to be carried out; see, also, section 5.4.6. If the second train forms an empty working this minimum may be reduced to four minutes.

Number of Turbo cars (Inner train when a second train to be admitted to same platform)

Platform 1		7 cars		
Platform 2		7 cars		
Platform 3		7 cars		
Platform 4		6 cars		
Platform 5		6 cars		
Platform 6		6 cars		
Platform 7		6 cars		
Platform 8		6 cars		
Platform 9		7 cars		
Platform 10		7 cars		
Platform 11		7 cars		
Platform 12		3 cars		
Platform 14		3 cars		

Station Working Rules

All Platforms: Trains reversing in Paddington Station must have different T.I.D.s for the inward & outward movements to or from the station. Note: A.R.S. (Automatic Route Setting) will not route trains attempting to reverse in Paddington using the same T.I.D.

Platforms 6 and 7 are intended primarily for use by Heathrow Express Class 332 EMUs and the use of these platforms by other stock is restricted to rights under Access Agreements.

Platforms 4 and 5: A 10 Car IET cannot ~~attach or~~ detach in platforms 4 and 5 at Paddington as there is a high SPAD risk ~~around the country-end set being detached.~~ **to the country-end set.**

Royal Oak Sidings, Paddington

ARS assumes Siding 1 for up trains if vacant

Stabling of trains at Royal Oak has not been practiced for several years, due to environmental complaints from the local authority. In view of the sensitivity of the noise pollution issue, the planned use of Royal Oak for stabling of trains is considered most undesirable. Any Train Operator considering such use **must**, therefore, consult with Network Rail before submitting a bid. Royal Oak Sidings are available in an emergency, subject to driver compliance with noise abatement, as detailed in the Sectional Appendix. This does not apply to electric trains. Bi mode trains must be AC mode only.

Royal Oak Junction

A margin of 2 minutes applies to conflicting moves

Westbourne Park GBRf

One train only

Ladbroke Grove

Junction Margin (*applies for moves to and from the Carriage Lines via 8096 and or 8097 points*)

First Movement	Second Movement	Margin
Up train passing Ladbroke Grove	Down train to Carriage Lines	2
Down train towards Old Oak Common	Up train passing Ladbroke Grove	3
Up train passing Ladbroke Grove	Up train from Carriage Lines	2

Adjustments to Sectional Running Times (allowance to be shown approaching this location)

Movement	Reason	Timing Load	Value
Crossing from ML to RL at Acton West in the Up direction Pass to Pass	Slower crossing speed	HST and HST (2+7) / 180 / 220/1 / 142 – 165/6 / 332	+{½}
Crossing from ML to RL at Acton West in the Up direction Pass to Pass	Margin applied during two track timetable operation	HST / 180	+{½}

	for Great Western Railway only		
--	-----------------------------------	--	--

Old Oak Common Crossrail Depot

Depot Back Line

Owing to the signalling restrictions on this section of the infrastructure, trains are not permitted to be timetabled over the depot back line unless access during pre-planned engineering possession is required and no other route into the depot is available.

North Pole IEP Depot

Depot Acceptance

Trains arriving at this location must be timed 10 minutes apart.

Trains departing this location must be timed 10 minutes apart.

Acton Main Line

Dwell Time

MTR Services	1/2
--------------	-----

Reversal

DMU (180) 5 car	3 - Hull Trains only
-----------------	----------------------

NB: trains from Acton Wells Jn to the Down Goods that are booked to change traincrew at Acton Main Line stop adjacent to SN182 signal on the Down Goods. It is not possible to route a second down train from Acton Wells Jn towards the Down Goods or Down Relief or Acton TC until the first train has drawn forward to SN197 signal at Acton West.

Acton West		
Junction Margin		
First Movement	Second Movement	Margin
Train passes Acton West Junction in the down direction	Train departing Acton Yard or Goods Lines in the down direction onto the relief lines	1 minute at Acton Yard/Goods Lines
Train passes Acton West Junction in the up direction using the Up Relief	Train departing Acton Yard or Goods Lines in the down direction onto the relief lines	2 minutes
Train departing Acton Yard or Goods Lines in the down direction onto the relief lines clearing Acton West Junction	Train departing Acton Yard or Goods Lines in the down direction onto the relief lines	1 minute at Acton Yard/Goods Lines

Passenger train into West Ealing Bay platform	Train (passenger or freight) from West Ealing to Drayton Green	1 minute

Hanwell		
Platform Re-occupation		
		3

Southall East Jn		
Signalling Limitations		
It is not possible to add pathing time in the up direction between Southall and Southall East Jn to trains timed ML, DML or GL as there are no intermediate signals. Pathing time must be added approaching Southall, or in the case of trains timed GL, with extended dwell time at Southall T.C.		
Crossing and conflicting moves		
First Movement	Second Movement	Margin
Passing Southall East Jn crossing to the down main or Southall T.C from the down relief or Hanwell Bridge Up Goods Loop	A conflicting train in the up direction passes or arrives at Southall.	Standard jn margin to apply to the second movement*
A train on the down relief passes or arrives at Southall	Passing Southall East Jn crossing to the up relief or Hanwell Bridge Up Goods Loop from the up main or Southall T.C.	Standard jn margin to apply based on passing time or arrival time at Southall or Southall TC of second movement*
Pass Southall station on the DML	From DRL to Southall West Loop or Up Brentford Sidings	2
Pass Southall station on the UML	Pass from DRL to Southall West Loop or Up Brentford Sidings	2
Pass from DRL to Southall West Loop or Up Brentford Sidings	Pass Southall station on DML	3½
Pass from DRL to Southall West Loop or Up Brentford Sidings	Pass Southall station on the UML	3½
For Southall West Jn, the correct Junction Margin to be applied is to be based on the slowest set of crossovers which the first train will travel over. *Trains running Up Main or Up the Down Main cannot arrive or pass Southall whilst a conflicting crossing move is taking place at Southall East Junction Trains running Up Relief can arrive at Southall whilst a conflicting move is taking place at Southall East Junction (but cannot depart the station)		

Southall		
Adjustment to Sectional Running Time (shown approaching this location)		

Movement	Reason	Timing Load	Value
Crossing from RL to ML at Acton West in the Down direction Pass to Pass	Slower Crossing Speed	22X / 80x	+{½}
Crossing from RL to ML at Acton West in the Down direction Pass to Pass	Slower Crossing Speed	D245 to D455	+{1}
Crossing from RL to ML at Acton West in the Down direction Pass to Pass	Slower Crossing Speed	142–159 / 165/6	+{½}
Crossing from RL to ML at Acton West in the Down direction Pass to Pass	Slower Crossing Speed	332	+{½}
Up Trains crossing from RL to ML at Stockley Jn that do not call at Hayes and Harlington	Not passing Heathrow Airport Jn at linespeed	80x 9/10 car	+{1}
Up Trains crossing from RL to ML at Stockley Jn that do not call at Hayes and Harlington	Not passing Heathrow Airport Jn at linespeed	16x / 387 / 769 / 80x 5 car 75-57210/75-57280/75-57350	+{½}
Dwell Time			
Class 165/6	½* #		
Class 387/319/769	½ *		
* 1 minute for Up services calling 0615 – 0930 and 1630 – 2000 Monday to Friday			
# 1 minute in the Down direction all day			

Southall West Jn

Crossing and conflicting moves

First Movement	Second Movement	Margin
Passing Southall West Jn crossing to the Up main or Southall T.C from the Up relief, Up Main or Hayes Goods Loop	A train in the down direction passes or arrives at Southall.	Standard jn margin to apply To be applied before the next TIPLOC west of Southall*
A train in the down direction from Southall TC Crossing to the Down Main or Down Relief.	A train in the up direction passes or arrives at Southall	Standard jn margin to apply based +1 minute on passing time or arrival time at Southall of second movement
A train in the down direction passes or departs from Southall	A train in the down direction from Southall TC crossing to the down main or down relief.	Standard jn margin to apply between departure or passing time at Southall of first movement, and departure or passing time at Southall TC of second movement.

For Southall West Jn, the correct Junction Margin to be applied is to be based on the slowest set of crossovers which the first train will travel over.

*Trains can arrive and depart from Southall Station whilst a conflicting move is taking place at Southall

West Junction, a junction margin time should be applied before the next TIPLOC in the down direction if a conflicting move will occur as Southall West Junction is not a mandatory timing point in the down direction

There should be no pathing added between Southall and Southall West in the down direction

Hayes & Harlington

Connectional Allowance | 3

Dwell Time

Class 165/6 | 1

EMU | 1

345 | 1

Platform Re-occupation | 7 (Bay/Up RL)*^

*: Where trains are using the same platform in the OPPOSITE direction, the platform re-occupation time will be 7 minutes at the East End and 4 minutes at the West End.

^ A train can depart Hayes Up Goods Loop towards Hayes and Harlington 2 minutes after a conflicting Up departure from Hayes and Harlington Platforms 4 or 5

Turnround allowances

Class 165/6 | 5*

Class 360/2 | 5

EMU excl. 360/2 - 8 car (from Paddington) | 5^

EMU excl. 360/2 - 4 car (from Paddington) | 4

* units up to 3-cars may be reduced to 3 minutes, if not sequential

^ may be reduced to 4, if a relief driver is diagrammed

Platform End Conflict Margin

First Movement	Second Movement	Margin
Up non-stopping EMU passes Heathrow Airport Jn or up stopping EMU departs Hayes and Harlington via Hayes East ML crossover	Down ML non-stopping EMU passes Heathrow Airport Jn or down stopping service arrives Hayes and Harlington	4
Up non-stopping EMU passes Heathrow Airport Jn or up stopping EMU departs Hayes and Harlington via Hayes East ML crossover	Down ML non -stopping service passes Heathrow Airport Jn towards Slough	3½
Up freight into Hayes & Harlington goods loop OR Hayes & Harlington Tarmac Sidings	Up train into platform 4	2 minutes after first train has come to a stop

Trains approaching Hayes and Harlington on the Up Relief Line cannot enter the platform if a Down train has already been signalled along the Up Relief Line to the Bay platform from the Southall West Junction direction.

* Hayes Tarmac Sidings can accommodate only one train at a time.

Freight Restrictions

Down trains from the Acton direction are required to run round in either Langley or Slough Up Goods Loop. They are then routed via the Up Goods Line from Iver to West Drayton. They then have to propel in from West Drayton. Trains for West Drayton TC are subject to a maximum length of 63 SLU on the Up Goods line at West Drayton. Trains may be 'top and tailed' and enter via West Drayton East Jn from the Acton direction, length subject to not blocking Iver Up Goods Loop.

Heathrow Airport Junction

Signalling Limitations

It is not possible to add pathing time to trains timed at Hayes and Harlington between Heathrow Airport Jn and Hayes and Harlington (both directions) as there are no intermediate signals.

Where the leading train calls at Hayes and Harlington the margin applies on departure of the leading train from Hayes and Harlington.

Where trains from the Slough direction require pathing time to maintain headway (or other allowances) at Heathrow Airport Junction, this should be added approaching Stockley Junction.

Stockley Junction

Adjustment to Sectional Running Time (allowance to be shown approaching this location)

Movement	Reason	Timing Load	Value
Up trains crossing from Up Relief to Up Main.	Acceleration	All	+{½} after jn

West Drayton ARC

Freight Restrictions

Down trains from the Acton direction are required to run round in either Langley or Slough Up Goods Loop. They are then required to propel into the terminal from Dawley Up Goods Loop.

West Drayton

Dwell Time

Signalled Moves	
It is not possible for a train to reach Platform 5 from the Down Main or Down Relief Line, via Maidenhead East Junction, when platform 5 is already occupied.	
Class 16X services arriving into Platform 5 from the east, should be no more than 5 vehicles in length.	

Maidenhead
<i>This is due to the presence of an intermediate Stop-Car Marker, which ensures that services from Marlow can be routed permissively into Platform 5, even when the London end of the platform is occupied.</i>
Movements from Platform 5, shunting to another platform, cannot be routed via Maidenhead East, and should be timed via the stabling lines.

Bristol Temple Meads						
Dwell Time						
80X, HST / LH, 220 & 221	3 ^{\$}					
142 to 170 & Castle	2 [#]					
^{\$} Increase to 10 minutes if watering is required.						
[#] Increase to 4 minutes if services reverse at Bristol Temple Meads.						
Minimum allowance for reversals or run rounds en-route						
L/H	15					
Platform Re-occupation						
5*						
* Where trains are using the same platform in the <u>same</u> direction may be reduced to 4 minutes by agreement. Where trains are using the same platform in the <u>opposite</u> direction, the minimum platform re-occupation time is 5 minutes but may be reduced to 4 minutes by agreement with the appropriate timetable manager.						
Margin between arrivals on adjacent platforms						
				3^		
^ The simultaneous routing of trains to opposing mid-platform signals on the same through platform line is prohibited . The first train must have arrived and be stopped before a second train is allowed to approach from the gantry signal at the opposite end of the station.						
Turnround allowances						
	HST	L/H	220 & 221	DMU/Castle	80X (5 car)	80X (9/10 Car)
From Paddington/Birmingham		30	20	20 [‡]	15	17
From Bicester Town/Oxford				15		
North of Birmingham	30	30	20	30		
Plymouth/Salisbury/Swansea		30		20	15	20
Bristol Parkway/Bath Spa/Severn Beach				5		
Cardiff Central/Gloucester/Swindon/Taunton/Westbury/Weston-s-Mare/Weymouth/Worcester		20		10	10	10
[‡] - May be reduced down to 17 minutes to permit the correct pathing of services, however no consecutive reductions can be made and under no circumstances should this allowance be reduced to less than 17 minutes.						
Normal platform usage or guidance (shown by arrival)						
Wherever possible, through trains should be timed into the far platform, and reversing trains should be timed into the near platform. The exception to this principle is through trains arriving in the down direction into Platforms 3/4, which should be timed into Platform 3 to avoid passengers having to walk back to the gates from Platform 4.						
When units are required to attach, involving a movement past a Platform Sharing Signal to the far platform, a minimum station dwell of 5 minutes must be applied to the second train. This incorporates the track section occupancy of 2 minutes required by the interlocking, for the Platform Sharing Signal (position light) to clear, and an attaching allowance of 3 minutes.						
Prior to submitting a bid Train Operators are requested to discuss with their Network Rail Business Manager any service (i) with a proposed platform occupation time of longer than 15 minutes beyond the specified minimum Turnround allowance time and/or (ii) which requires attaching and/or detaching of locomotive(s).						
In/Out Siding.						
It is not possible to arrive or depart from the In/Out Siding when a train is standing in or routed through Platform 15.						

Bristol West Junction

Junction Margins

Time needed between all conflicting moves	2½ (If first move is a passenger service/ECS/Light loco) 2½ (If first move is a freight up to 50 SLUs) 3 (If first train is a freight up to 80 SLUs) 3½ (If first train is a freight up to 103 SLUs)
---	---

A maximum of 3 trains may be held at Bristol West Junction as follows:-

Train A on the West Carriage Line at Signal BL6728
Train B on the West Carriage Washing Siding at Signal BL6730
Train C on the West Carriage Line at Signal BL6734

A minimum of 25 minutes is required to run round a loco hauled train at Bristol West Junction.

Only trains which may be walked through should reverse here (Except where two drivers are provided). Trains which cannot be walked through are to reverse at Bedminster.

XC HST (Power door) /80x	2 Except: For Summer Saturdays (Periods E, F and G) trains arriving in both directions between 09.00 and 15.00, 3 minutes.	
Class 142 to 166 & Castle	2	
22x	2 Except: For Summer Saturdays (Periods E, F and G) trains arriving in both directions between 09.00 and 15.00, 2½ minutes.	
The Up Sleeper (1A40) is to have a minimum dwell of 5 minutes.		
Minimum allowance for reversals or run rounds en-route		
DMU	3	
L/H	10 If Platform 4 or 5 is used then the margin needs to be 15 minutes, unless there is a loco change.	
Platform end conflicts		
First Movement	Second Movement	Margin
An Up train departing from platform 5	An Up train arriving into platform 6	3 minutes
Train from Dawlish or Exeter Central directions into Platform 1	Train from Cowley Bridge direction into Platform 3	3 minutes
Train from Dawlish or Exeter Central directions into Platform 3	Train from Cowley Bridge direction into Platform 1	Parallel move
Arrival from Dawlish direction into platforms 1, 3, 4 or 6	Arrival into platform 5	3 minutes
Arrival from Cowley Bridge direction into platform 1, 2, 3, 5 or 6	Arrival into platform 4	3 minutes
Train departing Exeter St Davids that doesn't call at Exeter St Thomas	Train departing Exeter St Davids that does call at Exeter St Thomas	3 minutes
Departing platform 5 in the Up direction	Arrival into platform 6 in the Up direction	4 minutes
Train departs Exeter St Davids towards Taunton	Train departs Exeter St Davids towards Crediton	3 minutes
Platform Re-occupation	4 Where trains are using the same platform in the OPPOSITE direction, the platform re-occupation time will also be 4 minutes with a minimum of 6 minutes at Platform 1 between a departure to and arrival from Exeter Central.	
	3 Platform 5 Up direction, same direction moves	
	3 Platform 4 Down direction, same direction moves	
No movement from Exeter Central to St David's into Platform 1/1A if that platform is occupied; similarly into 3/3A. However, an ECS held on the Down Waterloo Line behind Signal E335 may be permitted to enter Platform 1 or 3 when occupied. This move is mostly used to clear a unit out of Platform 1/3 in order that it may be correctly positioned (at the west end) for the next diagrammed working. No movement is allowed to/from the East into or out of Platforms 1/1A/2/3 or 3A if a train is signalled down the bank from Exeter Central into Platforms 1/1A.		
Prior to submitting a bid, Train Operators are requested to discuss with their Network Rail Business Manager any service (i) with a proposed platform occupation time of longer than 15 minutes beyond the specified minimum turnround allowance time and/or (ii) which requires attaching and/or detaching of locomotive(s).

Plymouth

Increased allowances apply as under:- Locomotive change only 10 m, Portion detached front 20 m, Portion detached rear 15 m, Portion attached front or rear 25 m.

Normal platforms used:- All through platforms are two-way to provide maximum flexibility and permissive working is allowed. Through services normally use platforms 4 and 5 in the down direction and 6, 7 and 8 in the up direction. When track capacity allows platform 4 may also be used for up trains.

Dock 2 - Stabling ECS and when required for parcel/mail trains Not to be used for stabling light locos.

Dock 3 - Stabling ECS and when required for parcel/mail trains Not to be used for stabling light locos.

Platform 3 - To and from Cornwall, including Gunnislake. Maximum capacity 2 x Class 150 units or equivalent.

Platform 7 - Up sleeper services.

Prior to submitting a bid, Train Operators are requested to discuss with their Network Rail Operational Planning Manager any service (i) with a proposed platform occupation time of longer than 15 minutes beyond the specified minimum Turnround allowance time and/or (ii) which requires attaching and/or detaching of locomotive(s).

Class 80x unable to attach/detach on platform 6 as this may result in a SPAD of the protecting signals.

Honeybourne North Junction

Trains to/from Honeybourne Sidings or Long Marston

Trains from Moreton in the Marsh – Trains from Moreton in the Marsh going to either Honeybourne Sidings or Long Marston will come to a stand behind E2483 Signal. E2483 Signal is a ground position signal. When the route is set from the Down Main to Honeybourne Through Siding, E2483 will show a proceed aspect. The formation of the train must have a driving cab at both ends.

Trains to Moreton in the Marsh – Trains from either Honeybourne Sidings or Long Marston going to Moreton in the Marsh will come to a stand behind E2442 Signal at Honeybourne North Jn. E2442 Signal is a 3-aspect signal with an associated position light signal. When the route is set for the train to proceed towards Moreton in the Marsh, E2442 will show either a yellow or a green main aspect. The position light signal only applies to movements towards the Through Siding. The formation of the train must have a driving cab at both ends.

		Freight between 2200T and 2400T	{1½}

Junction margins

First Movement	Second Movement	Margin
Train passes or arrives platform 1 from Bristol Parkway	Train departs platform 2 towards Bristol Parkway using DF	Simultaneous
Train passes or arrives Platform 1 from Bristol Parkway	Train passes Platform 2 towards Bristol Parkway using DF	1 minute

Rules regarding position of signals (On ML BL1580. On RL BL1578)

A train cannot cross from down Bristol line to platform 1 in the down direction (down Filton main) whilst there is a train standing in platform 2 (up Filton main).

A train cannot cross from Filton chord line to platform 1 in the down direction (down Filton main) whilst there is a train standing in platform 2 or platform 4 and cannot cross to platform 3 whilst there is a train in platform 4.

A train cannot enter platform 3 from down Bristol line in the down direction (down Filton relief) whilst there is a train standing in platform 2 (up Filton main) which is running towards patchway or Filton chord.

Only one train routing towards Patchway/Filton chord may call at Filton Abbey wood at any one time.

All trains longer than platform length crossing from Patchway direction and stopping in platform 1 will block Filton Jn No.1 points preventing a second train going from platform 2 towards Bristol Parkway

A down train terminating in platform 2 cannot turnback. Can only turnback in platform 1.

Dwell Time

GW500 READING TO COGLOAD JUNCTION VIA WESTBURY AND FROME AVOIDING LINES (BERKS. AND HANTS)

Reading

Adjustments to Sectional Running Times (allowance to be shown approaching this location)

Movement	Reason	Timing Load	Value
Trains booked to call at Reading West in the Up Direction (towards Reading Station). (Does not apply to trains routed to Reading platforms 1, 2 and 3).	Because of the mandatory timing point at Oxford Road Jn, it is not possible to calculate a Start to Pass SRT less than 30 secs between Reading West Stn and Oxford Road Jn. This is then further complicated by system issues not allowing a departure time at Reading West and a passing time at Oxford Road Jn to be the same. Therefore the adjustment allowance must be added between Oxford Road Jn and Reading Station.	150, 16x, 220, 221, 387, 319, 769, 80x	{-1/2}

Oxford Road Jn

Adjustments to Sectional Running Times (allowance to be shown approaching this location)

Movement	Reason	Timing Load	Value
Trains booked to call at Reading West in the Down Direction (from Reading Station)	Because of the mandatory timing point here, it is not possible to calculate a Pass to Stop SRT less than 30 secs between Reading West Stn and Oxford Road Jn.	150, 16x, 220, 221, 387, 319, 769, 80x	{-1/2}

Oxford Road Jn			
Adjustments to Sectional Running Times (allowance to be shown approaching this location)			
Movement	Reason	Timing Load	Value
	This is then further complicated by system issues not allowing an arrival time at Reading West and a passing time at Oxford Road Jn to be the same. Therefore the adjustment allowance must be added between Reading Station and Oxford Road Jn.		
Crossing and conflicting moves			
First Movement	Second Movement	Margin	
Reading feeder main line to Down Westbury line	Up Westbury Line		4

Reading West			
Junction Margins			
First Movement	Second Movement	Margin	
Train from Down Feeder Relief and Up Feeder Main.	Departure from Reading West	2½	
Adjustments to Sectional Running Times (allowance to be shown approaching this location)			
Movement	Reason	Timing Load	Value
Trains from Reading West Curve that are calling at Reading West Station.	Because of the new Mandatory Timing Point at Oxford Road Jn SRT's between Oxford Road Jn and Southcote Jn have been calculated based on trains operating to/from the route via Reading Station and therefore some differences for certain Timing Loads are required to take into account slowing to go to/from Reading West Curve.	220, 221	{1}
Connectional Allowance		3	
Signalling Limitations			
It is not possible to add pathing time between Reading West and Oxford Road Jn because the protecting signal for Oxford Road Jn is at the east platform end at Reading West. Increased dwell time should be added at Reading West where it would otherwise be necessary to add pathing time.			
It is not possible to add pathing time between Oxford Road Jn and Reading West because there are no intermediate signals. Additional Pathing time should be added approaching Oxford Road Jn instead.			

Southcote Junction			
Adjustments to Sectional Running Times (allowance to be shown after this location)

Dwell Time			

LH	1½
142 to 150	½
153 to 159	1
<p>A train that is booked to stop at Patchway in the UP direction that also conflicts with an opposing move from Bristol Parkway must NOT have an extended dwell at Patchway station. Any train that stops at Patchway in the UP direction and conflicts with an opposing move from Bristol Parkway is to have sufficient pathing time applied <i>approaching</i> Patchway.</p> <p>Trains from Filton West Jn must not have pathing time or stops added approaching Patchway, this should be added approaching Filton West Jn instead. Signal BL1834 (approaching Single Line Jn) cannot be cleared until BL2046 (protecting Patchway Junction No.1) is cleared, this is due to the risk of trains rolling back over 'Filton Tip AOCL'.</p>

From Newton Abbot	10			4	10	10
From Paddington	30±%	40	30±		20 [^]	20 [^]
From Waterloo via Pinhoe				25		
From North of Bristol (including South Wales)	30±	40	20	20	20 [^]	20 [^]
From Barnstaple/Plymouth				10		
[^] Plus 5 minutes if a shunt move is required						
* : Where trains are using the Up platform in the opposite direction, the minimum platform re-occupation time is 4 minutes.						
± Can be reduced to 25 minutes if the train does not go via Goodrington Sidings.						
% May be reduced to 28 minutes for 1C09 forming 1A87 when an attendant is on duty at Paignton South.						

The time allowed for a train to arrive at Paignton and then depart for Goodrington C.H.S. should be 9 minutes. This allows for detraining of customers; closing doors; contacting the signaller and traincrew lowering the barriers at Paignton South T.M.O. except when an attendant is on duty at Paignton South. In addition, the person in charge of the Yard must be contacted for permissions to allow access to the single line/yard. This will apply to all train types.

In addition, once a movement has been accepted from Goodrington C.H.S. and Signal PN12 cleared for the same, No route can be set from Signal PN3 on the Down Line (from Torquay) for arrivals into the station - a minimum of 3 minutes should elapse. Likewise, once Signal PN3 has been cleared for an arrival at Paignton from the Torquay direction no route can be set for an arrival from Goodrington C.H.S. Once that move is stationary a route from Goodrington C.H.S. can be set. It should be noted that Down trains can be routed either into DPL or UPL at Paignton. However, depending on the turnround allowances and occupation of the UPL it is desirable they be timed into the UPL.

Alternatively, a unit may run from the DPL into the UPL via Paignton North. This move should coincide with a train departing from Paignton (towards Torquay) to minimise the occupation of Paignton North crossing. All locomotives - hauled services are required to run to Goodrington CHS for run round purposes.

When more than one movement is to take place to and from (or within) Goodrington Carriage Sidings the sidings and line to Paignton are under the control of a "Person in Charge" in the event of more than one train being timed into Goodrington the Area Production Manager must be informed for staffing purposes.

Trains are to be timed as a single move Paignton - Goodrington - Paignton with the TID of the next working with the exception of DB Cargo; where each movement will be timed as separate trains, each with the appropriate TID relating to the incoming or outgoing passenger train.

GW628 LAIRA JUNCTION TO CATTEWATER VIA SPEEDWAY JUNCTION
Laira Depot

Trains from Plymouth to Laira Depot run under normal headway between Plymouth and Lipson Junction/Laira Junction see below for allowances around Mount Gould Junction.
Trains from Laira Depot must leave at a minimum of 15 minutes intervals.

Laira Junction

Routes to and from this location to Laira Depot

Inbound

Empty HSTs, 220s/221s, 80x, Castle, DMU formations or Loco Hauled Passenger Vehicles from Plymouth to Laira Depot are normally routed via Mount Gould Junction then via the Washing Apron to Laira Depot.

Empty HSTs, 220s/221s, 80x, Castle, DMU formations to Laira Depot may reverse at Mount Gould Junction without flushing or washing to avoid congestion, and will perform these operations on the outward journey see the allowances for Mount Gould Junction. Such working must be agreed by the TOC with the Depot Manager at Laira.

Empty trains may only be routed via Laira Junction where it is possible for the driver to walk through the train as there is no walking route.

Loco hauled NPCCS vehicles are normally routed via Mount Gould Junction to reverse.

Light Diesel locomotives between Plymouth station and Laira Depot will normally be routed via Laira Junction.

Outbound

Empty HSTs, 80x & Castle departing from Laira Depot to Plymouth station will normally be routed via Mount Gould Junction where they will reverse. However, it is possible to route them via Laira Junction DGL to correct the orientation of the train.

Empty 220s/221s single sets will normally be routed via Laira Junction.

Empty loco hauled trains departing from Laira depot will normally be routed via Mount Gould Junction.

Empty trains where it is not possible to walk through the train may only be routed via Laira Jn if reversing on the Down Goods line. Empty trains where it is possible to walk through the train may reverse on either the Down Goods line or Main line.

Light Diesel locomotives between Laira Depot and Plymouth station will normally be routed via Laira Junction.

Method of working loco hauled trains

Loco hauled trains are normally worked from Mount Gould Junction to Laira Depot by the Depot pilot locomotive with the train engine remaining attached or following.

Mount Gould Junction

Two HSTs, 80x, Castle, DMU formations or Class 220/1 units may be timetabled to be held in the section between Lipson Jn and Mount Gould Junction awaiting entry to the flushing apron.

Power 1[±]

Platform usage

Platform detail MUST be shown

If trains to and from Aberystwyth are planned to pass at Dovey Junction, the up (from Aberystwyth) train must arrive into platform 2a, the down train (from Machynlleth) must travel via Dovey Jn Down Loop and then into platform 2b.

If there is no passing movement, trains to Aberystwyth are not required to travel via Dovey Jn Down Loop.

Cambrian coast trains can only use platform 1

<p>\$ It is possible for a Down train requiring a token for the route towards Tenby to arrive in Whitland if there is no conflicting route from the branch. The Down train should arrive no less than 4 minutes before the Up train is due. The Down train will then have to wait for the driver of the Up train to hand in the token and for the signaller to deliver the token to the Down train. The minimum dwell time is the time difference between the arrival of the Down train and the departure from Whitland of the Up train plus 5 minutes for the token delivery.</p>	
Junction Margin.	
<p>If the route is set for an Up train from Tenby, it will not be possible for the signaller to set a route for any Down train to arrive at Whitland until the Up train has completed its station duties and handed in the token at the signalbox. The margin required between the arrival of an Up train from the branch and a Down arrival is 5 minutes.</p>	
Token exchange.	
<p>Trains to/from GW950 Whitland to Pembroke Dock have to either collect or set down a token for the single line section between Whitland and Tenby. They do this at Whitland SB, which is approximately 120 yards to the east of Whitland station. The SRTs include an allowance for this between Carmarthen and Whitland and vv.</p>

5.4 Platform Lengths

The table below shows the maximum length of train that may use each of the platforms at the following passenger stations. All lengths are in metres. The quoted lengths are the usable lengths from ramp to ramp unless specified. The measurements take no account of the need for signal sighting. Trains longer than the quoted lengths will only be accepted subject to the authority of the Route Director.

STATION	PLATFORM	USABLE LENGTH	NOTES
		In metres	
Bristol TM			
Platforms 3 to 12 inclusive are islands combining two platforms on each face, with the odd numbers London end and even numbers at the Penzance end Mid Platform Signals indicate the limits of each platform.			
Permissive Working			
Permissive working (PP) is allowed on through platform lines 3/-/12 for the purpose of attaching, detaching and platform sharing.			
Classes of train 1, 2, 3 ECS, 5, 9 and 0 are allowed, together with any class of train formed only of MPV vehicles when operating as a railhead treatment or inspection train.			
When a train (the second train) arrives which is due to attach to the rear of another train in a far platform, there must be enough room for the whole of the second train in the near platform.			
The platform lengths shown below in the third column, are the measured lengths of the platforms, and DO NOT account for the positions of car stop markers, or stand back distances (assume 10m)

5.4.1 Loop Lengths

The table below shows the maximum length of train that may use each of the loops at the following stations. All lengths are in SLUs (Standard Length Unit); an SLU measures 21 Feet, and metres. All lengths are exclusive of an allowance of one locomotive. Check Sectional Appendix for locations where standage is not quoted. Bids for trains longer than the quoted lengths will only be accepted subject to the authority of the Route Director. See also Section 4.5.

5.5 Timing Allowances

All allowances shown are in minutes.

SX Daytime allowances apply at all times except where specified differently in Sections 5.5.2, 5.5.3, 5.5.4, 5.5.5 and 5.5.6

All allowances are indicative for the Final Principle Rules and are subject to change.

E refers to engineering allowance

P refers to performance allowances

5.5.1 SX Daytime (See routes for applicable times)

On Monday different allowances apply on some routes until the end of the 'Sunday' allowances at the times specified in the tables below. Please refer to Section 5.5.4 for the 'Sunday' allowances section to identify the routes to which those allowances apply.

GW103 PADDINGTON TO UFFINGTON					
Timing Section	Type	ML	RL		Remarks
Down – Daily					
Approaching Slough	ES	1	1		Additional allowance applies to all trains timed to operate during the Two Track weeknight timetable
Approaching Maidenhead	E		1		Applies to class 165/166/387/319/769 terminating at Maidenhead or Bourne End
Approaching Twyford	E		1		Applies to class 165/166/387/319/769 terminating at Twyford or Henley on Thames
Approaching Reading or Kennet Bridge Jn	E	1	1		Does not apply to passenger services routed from Reading New Jn
	ES	1	1		Additional allowance applies to all trains timed to operate during the Two Track weeknight timetable
	E		1		Applies to 165/166/387/319/769/80x
Approaching either Didcot East Jn or Didcot Parkway	E	1	1		Allowance does not apply to class 165/166/387/319/769 operated services unless they terminate at Didcot Parkway
	ES	1	1		Additional allowance applies to all trains timed to operate during the Two Track weeknight timetable
Up – Daily					
Approaching Didcot	E	1			Allowance does not apply to Class 165/166/387/319/769 operated services
Approaching Reading West or Reading High Level Jn	E	1	1		Does not apply to class 165/166/387/319/769 operated services routed via the Main Lines from Didcot East
Approaching Acton West Junction	E	1	1		Trains routed via Acton Wells or Acton Yard only
Approaching Ladbroke Grove	E	1	1		

GW105 UFFINGTON TO FORDGATE VIA BOX

Timing Section	Type	ML	RL		Remarks
Down – Daily					
Approaching Swindon	E	1			
Approaching Bathampton Junction	E	1			
Approaching North Somerset Junction	E	1			
Up – Daily					
Approaching Parson Street	E	1			
Approaching Swindon	E	1			

GW107 WORLE JUNCTION TO UPHILL JUNCTION VIA WESTON-SUPER-MARE

Timing Section	Type	ML	RL		Remarks
Down – Daily					
Approaching Weston-Super-Mare	E	1			Applies to services terminating at Weston-S-Mare only.

GW108 FORDGATE TO PENZANCE

Timing Section	Type				Remarks
Down – Daily					
Approaching Taunton	E	1			Trains terminating at Taunton only.
Approaching Cowley Bridge Jn	E	1			Does not apply to services starting at Taunton or Tiverton Parkway
Approaching Lipson Jn	E	1			
Approaching Long Rock	E	1			
Up – Daily					
Approaching Exeter St Davids	E	1			
Approaching Plymouth	E	1			

GW110 OLD OAK COMMON WEST TO SOUTH RUISLIP (EXCL.)

Timing Section	Type				Remarks
Up – Daily					
Approaching Greenford West Junction	E	1			From NW&C Route MD 701 Princes Risborough to Marylebone

GW174 WEST EALING TO GREENFORD WEST JUNCTION

Timing Section	Type				Remarks
Down – Daily					
Approaching Greenford	E	1			Allowance only applies to Class 165, 166 and 769 units

GW180 HEATHROW AIRPORT JUNCTION TO HEATHROW TERMINALS 4 & 5

Timing Section	Type				Remarks
Down – Daily					
Approaching Heathrow Tunnel Junction	E	1			

GW200 DIDCOT TO HEYFORD (EXCL.)

Timing Section	Type	ML			Remarks
Down – Daily					
Approaching Oxford	E	1			
Up – Daily					
Approaching Didcot North Junction	E	1			

GW310 WOLVERCOTE JUNCTION TO NORTON JUNCTION

Timing Section	Type				Remarks
Down – Daily					
Approaching Norton Jn	E	1*			* Does not apply to services formed with 165, 166 units
Up – Daily					
Approaching Wolvercote Junction	E	1			Allowance does not apply to Class 165/166 operated services

GW340 WORCESTER SHRUB HILL TO SHELWICK JUNCTION

Timing Section	Type				Remarks
Down – Daily					
Approaching Ledbury	E	1			
Approaching Shelwick Junction	E	1			* Does not apply to services formed with 165, 166 and 769 units
Up – Daily					
Approaching Worcester Foregate St	E	1*			* Does not apply to services formed with 165, 166 and 769 units

GW370 DROITWICH SPA TO CUTNALL GREEN

Timing Section	Type				Remarks
Up – Daily					
Approaching Droitwich Spa	E	1*			Also shown MD 430 Droitwich Spa to Stourbridge North Junction. * to be shown approaching Droitwich Spa Goods Loop for trains booked to use the loop.

GW401 ASHCHURCH (INCL.) TO WESTERLEIGH JUNCTION

Timing Section	Type				Remarks
Down – Daily					
Approaching Cheltenham Spa	E	1			
Approaching Westerleigh Jn	E	1*			Applies to trains to South Wales via Severn Tunnel Jn only
Up – Daily					
Approaching Gloucester Yard Junction	E	1*			

GW450 STOKE GIFFORD JUNCTION TO BRISTOL EAST JUNCTION

Timing Section	Type				Remarks
Down – Daily					
Approaching Dr Day's Jn	E	1			

GW480 SWINDON TO STANDISH JUNCTION

Timing Section	Type				Remarks
Down – Daily					
Approaching Standish Jn	E	1			
Up – Daily					
Approaching Rodbourne Jn	E	1			

GW490 GLOUCESTER YARD JUNCTION TO HORTON ROAD

Timing Section	Type				Remarks
Up – Daily					
Approaching Horton Road Jn	E	1			To be applied if From Westerleigh Jn and Terminating at Gloucester

GW500 READING TO COGLOAD JUNCTION VIA WESTBURY AND FROME AVOIDING LINES (BERKS. AND HANTS LINE)

Timing Section	Type				Remarks
Down – Daily					
Approaching Newbury	E	1			Terminating 165/166/387/319/769s only
Approaching Bedwyn	E	1			Terminating trains only
Approaching Heywood Road Junction	E	1			
Approaching Cogload Junction	E	1			
Up – Daily					
Approaching Fairwood Junction	E	1			
Approaching Newbury	E	1			Does not apply to services starting at Bedwyn
Approaching Southcote Junction	E	1			

GW5001 BEECHGROVE GF TO WESTBURY SOUTH JUNCTION

Timing Section	Type				Remarks
Northbound - Daily					
Approaching Westbury	E	1			

GW510 WESTBURY NORTH JUNCTION TO BATHAMPTON JUNCTION

Timing Section	Type				Remarks
Southbound – Daily					
Approaching Westbury	E	1			
Northbound – Daily					
Approaching Bathampton Junction	E	2*			[1] for trains from the Salisbury direction

GW600 WOOTTON BASSETT JUNCTION TO PILNING

Timing Section	Type				Remarks
Down – Daily					
Approaching Westerleigh Junction	E	1			
Up – Daily					
Approaching Patchway	E	1			Increased to 2 minutes if the service is running via Charfield to Birmingham

GW620 NEWTON ABBOT WEST JUNCTION TO GOODRINGTON C.S.

Timing Section	Type				Remarks
Down – Daily					
Approaching Paignton	E	1			

GW660 PAR TO NEWQUAY

Timing Section	Type				Remarks
Down – Daily					
Approaching Newquay	E	2			1 for services starting from Par

GW700 GLOCESTER BARNWOOD JN TO SEVERN TUNNEL JN

Timing Section	Type				Remarks
Up – Daily					
Approaching Gloucester	E	1			2 if terminating at Gloucester

GW730 SHREWSBURY TO NEWPORT MAINDEE WEST JN (NORTH AND WEST LINE)

Timing Section	Type	ML			Remarks
Down – Daily					
Approaching Shelwick Jn	E	2			
Approaching Maindee North Jn	E	1			
Up – Daily					
Approaching Hereford	E	2			
Approaching Sutton Bridge Jn	E	1			

GW731 ABBEY FOREGATE JUNCTION TO WREXHAM NORTH JN

Timing Section	Type				Remarks
Up – Daily					
Approaching Shrewsbury	E	2			
Approaching Wrexham General	E	2			Only applies to trains terminating at Wrexham/Croes Newydd

GW733 SUTTON BRIDGE JN TO ABERYSTWYTH

Timing Section	Type	ML			Remarks
Down – Daily					
Approaching Machynlleth	E	1			
Approaching Aberystwyth	E	1			

GW733 SUTTON BRIDGE JN TO ABERYSTWYTH

Timing Section	Type	ML			Remarks
Up – Daily					
Approaching Machynlleth	E	1			
Approaching Sutton Bridge Jcn	E	1			

GW734 DOVEY JN TO PWLLHELI

Timing Section	Type				Remarks
Down – Daily					
Approaching Pwllheli	E	1			
Up – Daily					
Approaching Dovey Jn	E	1			

GW810 RHYMNEY TO QUEEN STREET NORTH JUNCTION

Timing Section	Type				Remarks
Down – Daily					
Approaching Queen Street	E	1			
Up – Daily					
Approaching Caerphilly	E	1*			* Applies to trains terminating at Caerphilly only
Approaching Bargoed	E	1			

GW828 CORYTON TO HEATH JUNCTION

Approaching Coryton	E	1			
---------------------	---	---	--	--	--

GW830 MERTHYR TYDFIL TO BARRY ISLAND VIA CARDIFF QUEEN STREET

Timing Section	Type				Remarks
Down – Daily					
Approaching Queen Street	E	1			
Approaching Barry	E	1			
Up – Daily					
Approaching Cardiff Central	E	1			
Approaching Radyr	E	1			Only applies to trains terminating at Radyr
Approaching Pontypridd	E	1			Only applies to trains terminating at Pontypridd
Approaching Merthyr Tydfil	E	1			

GW834 HIRWAUN TO ABERCYNON

Timing Section	Type				Remarks
Up – Daily					
Approaching Aberdare	E	1			

GW835 TREHERBERT TO PONTYPRIDD JUNCTION

Timing Section	Type				Remarks
Up – Daily					
Approaching Treherbert	E	1			

GW840 RADYR JUNCTION TO CARDIFF (CITY LINES)

Timing Section	Type				Remarks
Up					
Approaching Radyr	E	1			

GW864 COGAN JUNCTION TO PENARTH

Timing Section	Type				Remarks
Down - Daily					
Approaching Penarth	E	1			

GW870 BARRY TO BRIDGEND, BARRY JUNCTION (VOG LINE)

Timing Section	Type				Remarks
Down – Daily					
Approaching Bridgend	E	1½			For stopping passenger train services
Up – Daily					
Approaching Barry	E	1½			For stopping passenger train services

GW890 COURT SART JN TO MORLAIS JUNCTION

Timing Section	Type				Remarks
Down					
Approaching Morlais Jn	E	1			

GW900 PILNING TO FISHGUARD HARBOUR

Timing Section	Type	ML	RL		Remarks
Down – Daily					
Approaching Newport	E	1	1		
Approaching Long Dyke Jn	E	1	1		
Approaching Margam Moors Jn	E	1			For trains entering Margam TC only
Approaching Landore Jn	E	1			
Approaching Carmarthen Jn	E	2			[2] can be applied approaching Carmarthen station if terminating.
Approaching Fishguard Harbour	E	2			[2] to be applied approaching Fishguard and Goodwick if terminating
Up – Daily					
Approaching Carmarthen Bridge Jn	E	2			
Approaching Swansea Loop West Jn	E	2			
Approaching Cardiff Central	E	1			
Approaching Severn Tunnel Jn	E	1	1		Applies only to trains to Birmingham or beyond routed via either Chepstow [GW700] or Yate [GW401]

GW910 CRAVEN ARMS TO LLANDEILO JUNCTION

Timing Section	Type				Remarks
Down – Daily					
Approaching Llandrindod	E	1			
Approaching Llandeilo Jn	E	1			
Up – Daily					
Approaching Llandrindod	E	1			
Approaching Craven Arms	E	1			

GW950 WHITLAND TO PEMBROKE DOCK

Timing Section	Type				Remarks
Down – Daily					
Approaching Pembroke Dock	E	2			

GW960 CLARBESTON ROAD TO MILFORD HAVEN

Timing Section	Type				Remarks
Down – Daily					
Approaching Milford Haven	E	2			

NW3001 SALTNEY JUNCTION TO HOLYHEAD

Timing Section	Type				Remarks
Down – Daily					
Approaching Llandudno Jn	E	1			Only applies to trains terminating at Llandudno Junction
Approaching Bangor	E	1			Only applies to trains terminating at Bangor
Approaching Holyhead	E	1			
Up – Daily					
Approaching Bangor	E	1			
Approaching Llandudno Jn	E	1			
Approaching Saltney Jn	E	2			

NW3015 LLANDUDNO JUNCTION TO BLAENAU FFESTINIOG

Timing Section	Type				Remarks
Down – Daily					
Approaching Blaenau Ffestiniog	E	2			
Up – Daily					
Approaching Llandudno Junction	E	2			

NW3017 LLANDUDNO JUNCTION TO LLANDUDNO

Timing Section	Type				Remarks
Down – Daily					
Approaching Llandudno	E	3			Applies to trains originating at Chester and beyond

5.5.2 SX Night Time (See routes for applicable times)

SX daytime allowances apply to those routes excluded from this section

5.5.3 SO Daytime (See routes for applicable times)

SX daytime allowances apply to those routes excluded from this section.

5.5.4 SO Nighttime (See routes for applicable times)

SX daytime allowances apply to those routes excluded from this section.

5.5.5 Sundays Daytime (See routes for applicable times)

SX daytime allowances apply to those routes excluded from this section.

GW103 PADDINGTON TO UFFINGTON			
Up		Periods A/B/C/E	Period D
Approaching Reading	E	2 minutes ML and 1 minute RL but does not apply to Class 165/166/387/319/769 services unless terminating at Reading.	2 minutes ML and 1 minute RL but does not apply to Class 165/166/387/319/769 services unless terminating at Reading.

Down			
Approaching Slough*	E	4	
Approaching Slough	E	1 minute for class 165/166/387/319/769 services timed Relief Line from Ladbroke Grove.	1 minute for class 165/166/387/319/769 services timed Relief Line from Ladbroke Grove.
Approaching Reading*	E	1	5

Approaching Reading	E	1 minute ML or RL but does not apply to passenger services routed from Reading New Jcn.	1 minute ML or RL but does not apply to passenger services routed from Reading New Jcn.
---------------------	---	---	---

5.5.6 Sunday Night time (See routes for applicable times)

SX daytime allowances apply to those routes excluded from this section.

5.6 Watering of Steam Locomotives

The following sites only are authorised. The constraints shown must be strictly adhered to and in cases the Train Operator should produce a Method Statement describing their safety control measures, etc. and should issue suitable internal operating instructions:

Location	Constraints
Holyhead Platform 1	
Llandudno Junction Platforms 1 and 4	

It should be noted that 'Goods Line Authority' may be required for some of the locations listed above. See Section 5.1.4 above for Passenger Trains over Goods Lines

On Network Rail controlled infrastructure, work (i.e. the watering activity) may only take place under the control of a COSS.

Additional sites may be considered by the Route's Safety Review Group subject to the provision of suitable supporting documentation.

6 Timetabling Considerations

6.1 Advertised and Working Times

It is not permissible for trains to be specified to be advertised to arrive before or depart after the booked times stated in the working timetable (WTT).

It is permissible for trains to be specified to be advertised to depart before the booked times stated in the working timetable in the following circumstances;

- (i) Where the WTT departure time is delayed to achieve the required headway behind a preceding train or margin following a conflicting move.
- (ii) As an aid to punctual departure where this practice has been agreed between the Train Operator and Network Rail.

By agreement between the Train Operator and Network Rail, trains may be specified to be advertised to arrive after the booked times stated in the WTT. This agreement is used instead of engineering/performance allowances.

6.2 Timing of Light Locomotives

It is a general principle that all light locomotive movements will be timed.

6.3 Two-Track Timetable Railway

For the section of line between Ladbroke Grove and Foxhall Jn the timetable can be planned such that it operates over two lines only. The times for this are shown in the Engineering Access Statement.

Additional Timing Loads for “Two - Track timetable” London Paddington to Reading.

HST(2T)
DMU(T2T)
D245-2T
EMU(2T)
180(2T)
220(2T)
221(2T)

These contain Relief Line Sectional Running Times (SRTs), which can be line-coded ML or RL, without corrupting the existing differential four-track SRTs and should be used for all trains, which run during the weeknight and weekend engineering periods defined in Engineering Access Statement. These trains should be pathed for 2-track operation.

West Ealing Mandatory Timing Point during “2T” operation

Note that timing of Up Trains at West Ealing is mandatory under two-track operation.
