Email: NRT-WTT@NetworkRail.Co.Uk

Train Operating Companies and Infrastructure Company users should contact their own documentation control point

This timetable contains freight and departmental trains which are of a stable and regular nature. There may however be occasions on which they will be subject to short notice cancellation on a day-to-day basis when insufficient traffic is available for movement. On these occasions separate advice will be given.

NOTES

- 1) The codes in columns immediately above the train titles are for train reporting. The first position indicates the classification, the second the destination as shown below, the third and fourth the identity number. In the case of light engines travelling before or after working trains, the code will be zero, followed by the destination indication and identity number applicable to the train or using the destination indicator below.
- 2) Where no separate time is shown for arrival and departure, the time indicated is the departure time. Small type with / (e.g. 02/00) indicates passing time.
- 3) Trains will normally be air-braked. In those cases where vacuum braking applies, the symbol 'B' will be shown against operating characteristics.
- 4) Trains that run on Sundays appear at the end of each table.

DESTINATION INDICATION LETTERS

Letter	Destination
A	Coal empties from Drax PS and coal to Ratcliffe
B	West Burton PS
C	Eggborough Power Station: Immingham-Scunthorpe Coal and v.v.
D	Former Doncaster/Leeds District
E	Former Eastern Region
F	Cottam Power Station: service to/from Boulby Branch
G	Ore movements South Humberside
H	Drax Power Station/Former Peterboro-Kings Cross Districts
J	Former Sheffield District: High Marnham Power Station
K	South Yorkshire & North Notts collieries
L	Former Anglia Region
M	Former London Midland Region
N	Former Ncle/Teesside/York Districts
O	Former Southern Region
R	Coal empties from Eggborough Power Station
S	Former Scottish Region
V	Former Western Region
W	Coal empties from Cottam & West Burton Power Stations
X	Indicates that the train conveys an exceptional load for which special conditions apply. Signallers must ensure that they are in possession of the special conditions relevant to the train(s).
Y	Ferrybridge Power Station

NB : B.C,F and H apply to intrazonal trains only.

EXPLANATION OF OPERATING CHARACTERS

Days run

M	Monday	F	Friday
T	Tuesday	S	Saturday
W	Wednesday	Sun	Sunday
Th	Thursday		

O The addition of the letter 'O' indicates that the train will run on that day or those days only

X The addition of the letter 'X' indicates that the train will not run on that day or those days

EWD Runs every week day (Monday to Saturday)

Where * * appear in the column heading either side of the day(s) run, this indicates that the train starts its journey on the previous day, as indicated in the "Orig. Dep. Time" heading. The days shown in the "Dates of Operation" heading indicate the actual days of operation applicable to that station bank.

Running Line and Platform Indications

AL	Avoiding Line	SL	Slow Line
ESL	East Slow Line	SL1	Slow Line No 1
FL	Fast Line	SL2	Slow Line No 2
DGL	Down Goods Line	2WG	Two Way Goods
GL	Goods Line	DG	Two Way Goods No 2
LSL	Leeds Line	NNL	Normanton Line
TL	Through Line	UDS	Up / Down Slow
WSL	West Slow Line		

Timing Differentials

a	Arrives 1 minute earlier	c	Arrives 2 minutes earlier
e	Arrives 3 minutes earlier	g	Arrives 4 minutes earlier
j	Arrives 5 minutes earlier		

Margins and allowances

and	[4]	Indicates the number of minutes allowed for temporary speed restrictions other engineering work.
	(2)	Extra time for pathing requirements
	*	In arrival or departure time - stops or shunts for other trains to pass only

Other Commonly Used Abbreviations

B	Vacuum braked train
C	Stops to change traincrew
D	Stops to detach only
E	Stops for examination
G	Train (wo)man required for train consisting of other than coaching stock vehicles
L	Stops to change loco
OP	Stops for operational reasons
PR	Propelling between points shown
Q	Runs when required
RM	Stops for reversing movement or driver to change ends
RR	Stops for reversing movement by running round
S	Stops for railway personnel only
t	Stops only for tablet, staff and token purposes
T	Stops to detach and attach
U	Stops to attach only
X	Points at which trains run from one running line to another
Y	Runs to and from terminals/yards as determined by traffic demand
Z	May convey traffic to Channel tunnel gauge
<u><i>Not to be diverted from booked route without authority.</i></u>	
 	Light engine
@	Commercial or operating changes at this location
k/kk	Stops for operational requirements and TOPS Stops where required
TS	TOPS stops requirement
\$ or #	See Explanatory column note

TIMING LOAD DESCRIPTIONS

The timing load description depicts the trailing weight and traction type used on a train. The timing load adopted for any particular train does not override the maximum load applicable for the route and traction concerned as published by Network Rail. In order to avoid very large numbers of different timing loads, a banded approach is adopted, with steps approximately every 200 tonnes. In some cases, the Sectional Running Times (SRTs) may be common to two or more timing load bands pending review of the data used to determine the timings.

One of two different formats is used for freight timing load descriptions.

- 1 Used for diesel hauled class 6, 7, and 8 trains without specifying a particular traction class. The maximum trailing weight on which the timing is based can be determined by reference to the Timing Reference Matrix.

45	-	TR70
Max speed of the train	Indicates whether the timings incorporate BR 29973 (RT3793) speed restrictions	Timing Reference number
	B = Both (i.e. a Heavy Axle Weight Container train) C = Container H = Heavy Axle weight - = Standard SRTs	

- 2 Used for all other freight services.

75	C	47	S	12
Max speed of the train	Indicates whether the timings incorporate BR 29973 (RT3793) speed restrictions	Loco class	Indicates whether the train is single or double headed	trailing weight in hundreds of tonnes. (i.e. 12 indicates a weight between 1200 and 1299)
	B = Both (i.e. a Heavy Axle Weight Container train) C = Container H = Heavy Axle weight - = Standard SRTs	Loco class number.	S = single headed D = Double headed	For less than 1000 tonnes a leading zero is used, i.e. 08 indicates 800 tonnes

TIMING REFERENCE MATRIX

TIMING		Class 37		Class 47		Class 59		Class 60		Class 66
REF No.		tonnes		tonnes		tonnes		tonnes		tonnes
TR40		300		535		695		655		695
TR55		430		735		955		900		950
TR70		555		940		1210		1145		1210
TR85		685		1145		1465		1390		1465
TR100		810		1345		1725		1630		1720
TR115		940		1550		1980		1875		1975
TR130		1065		1755		2235		2120		2235
TR145		1190		1955		2490		2365		2490
TR160		1320		2160		2750		2610		2745
TR175		1445		2360		3005		2865		3000
TR190		1575		2565		3260		3095		3260
TR200		1660		2700		3430		3260		3430

TIMING LOADS USED FOR CONTAINER OR HEAVY AXLE WEIGHT TRAINS

A separate series of timing loads will be used for trains conveying containers or heavy axle weight vehicles and therefore subject to specific restrictions. It is the intention that such restrictions will in future be incorporated in the SRTs for these trains although this may not universally be the case at present.

DOUBLE-HEADED TRAINS

There is no exact formula for the increase in haulage capacity of a double-headed train as this will depend upon both the traction and route characteristics. Where possible, specific double-headed timing loads are shown.

ALLOCATION OF TRAIN HEADCODES

SCOTS-ANGLO POWER STATION COAL SERVICES

The allocation of train headcodes on the Scots-Anglo coal services has been simplified. Trains will carry a single headcode throughout their journey from their loading point to the collecting power station. **It should be noted that this will apply to Scots-Anglo coal trains and their associated empties only; the allocation of train headcodes for other coal services remains unchanged.**

Under this procedure, all such coal trains will carry either the letter **U or J** as the second digit in the train headcode. The third and fourth digits will be allocated in bands of ten numbers to identify the specific power station. There will be a further split in these bands of ten numbers to differentiate between Short Term Planning (STP) and Very Short Term Planning (VSTP) trains. The same procedure will apply for empties from England to Scottish loading points; the letter **O or K** will be the second digit in the train headcode, with the third and fourth digits determined by the Scottish loading point.

Where “standby” paths identified in the Working Timetable are to be used for part of a journey, EWS will identify them in its bid to Network Rail, in order that Network Rail’s Operational Planning and Control offices are aware of which “standby” paths remain available for use.

This procedure will apply to STP and VSTP trains only; trains shown in the WTT will continue to carry the headcode shown therein. Exceptionally, where a train shown in the WTT runs to another power station, the WTT headcode will be replaced by an STP or VSTP number, with a second digit of **U or J**.

ALLOCATION OF TRAIN HEADCODES

SCOTS-ANGLO POWER STATION COAL SERVICES: SOUTHBOUND LOADED SERVICES

The arrangements outlined below will apply to all empty Short Term Planning (STP) and Very Short Term Planning (VSTP) coal trains departing from Scottish loading points after 0001 Sunday 28th March 1999, until further notice.

All loaded STP and VSTP coal trains departing from Scottish loading points to collecting power stations will carry the letter **U** as the second digit in the train headcode.

The range of numbers that will apply to each individual loading point is detailed below. These numbers are further split to differentiate between STP and VSTP trains.

LETTER NO.		RANGE		POWER STATION
U	01-06	STP	Cottam	
U	07-09	VSTP	Cottam	
U	60-66	STP	Drax	
U	67-69	VSTP	Drax	
U	20-26	STP	Eggborough / Ferrybridge	
U	27-29	VSTP	Eggborough / Ferrybridge	
U	30-36	STP	High Marnham	
U	37-39	VSTP	High Marnham	
U	40-46	STP	West Burton	
U	47-49	VSTP	West Burton	
U	50-56	STP	Fiddlers Ferry	
U	57-59	VSTP	Fiddlers Ferry	

ALLOCATION OF TRAIN HEADCODES

SCOTS-ANGLO POWER STATION COAL SERVICES:

NORTHBOUND EMPTY SERVICES

The arrangements outlined below will apply to all empty STP and VSTP coal trains departing for Scottish loading points after 0001 Sunday 28th March 1999, until further notice.

All empty STP and VSTP coal trains will be worked from power stations to collecting yards under existing train headcode numbering systems. Trains will then be forwarded from these locations to Scottish loading points carrying the letter **0** as the 2nd digit in the train headcode.

The range of numbers that will apply to each individual loading point is detailed below. The numbers are further split to differentiate between STP and VSTP trains.

LETTER NO.		RANGE	POWER STATION
O or K	01-09	STP	Falkland Yard *
O or K	10-14	VSTP	Falkland Yard *
O or K	15-18	STP	Hunterston Low Level
O or K	19	VSTP	Hunterston Low Level
O or K	20-25	STP	Killoch
O or K	26-29	VSTP	Killoch
O or K	30-34	STP	Knochshinnoch
O or K	35-39	VSTP	Knochshinnoch
O or K	40-59	STP	Hunterston High Level
O or K	60-69	VSTP	Hunterston High Level
O or K	70-74	STP	Ravenstruther
O or K	75-79	VSTP	Ravenstruther

Note specifically 6077 not to be used

O or K	80-85	STP	Mossend
O or K	86-89	VSTP	Mossend

Note specifically 6081 not to be used

O or K	90-92	STP	Millerhill
O or K	93-94	VSTP	Millerhill
O or K	95-97	STP	Thornton / Westfield
O or K	98-99	VSTP	Thornton / Westfield

* Includes Ayr, Broomhill & Chalmerston
